NIPPON COLUMBIA CO., LTD.

NOTE ON USE

 <ul style="list-style-type: none"> Avoid high temperatures. Allow for sufficient heat dispersion when installed on a rack. 	 <ul style="list-style-type: none"> Keep the set free from moisture, water, and dust. 	 <ul style="list-style-type: none"> Do not let foreign objects in the set.
 <ul style="list-style-type: none"> Handle the power cord carefully. Hold the plug when unplugging the cord. 	 <ul style="list-style-type: none"> Unplug the power cord when not using the set for long periods of time. 	 <ul style="list-style-type: none"> Do not let insecticides, benzene, and thinner come in contact with the set.
 <ul style="list-style-type: none"> Handle the power cord carefully. Hold the plug when unplugging the cord. 	 <ul style="list-style-type: none"> *(For sets with ventilation holes) Do not obstruct the ventilation holes. 	 <ul style="list-style-type: none"> Never disassemble or modify the set in any way.

使用注意事項

 <p>防止高溫</p> <ul style="list-style-type: none"> 勿將本機放置於受烈日曝曬或靠近發熱器材的位置。 	 <p>注意濕氣、水和塵</p> <ul style="list-style-type: none"> 勿將本機放置於潮濕或多塵的位置。花灑或具有水的物件均不宜置在本機上方。 	 <p>勿讓雜物掉入體內</p> <ul style="list-style-type: none"> 特別要留意勿讓針、髮夾、硬幣等進入本機。
 <p>開關/機體安裝注意</p> <ul style="list-style-type: none"> 避免將本機裝於密封的櫃架內。 裝於櫃架或機箱時，要配與足夠大的通風孔，以加強散熱。 	 <p>當你外出時</p> <ul style="list-style-type: none"> 長時間不用本機時，例如外出旅行時，請將機體拉離電源插座。 	 <p>保護機殼</p> <ul style="list-style-type: none"> 避免在本機附近噴灑殺蟲劑，也勿用汽油、天拿水或任何溶劑清潔機殼，因這等溶劑易引起產品顏色改變。清潔要用軟布，在用化學品清潔的布擦時請小心遵守說明書規定。
 <p>留意通風孔</p> <ul style="list-style-type: none"> 在通風孔出風時切勿擋住通風孔，導致風阻在通風孔內積出。 	 <p>留意通風孔的散熱</p> <ul style="list-style-type: none"> 勿堵塞通風孔的散熱孔。 堵塞通風孔會損壞本機。 各通風孔對本機內部散熱有重要，必須特別留意。若通風孔有外物阻礙，或有使機內溫度升高的。 	 <p>勿打開機殼</p> <ul style="list-style-type: none"> 打開機殼頂蓋或底蓋，及伸入機殼內部是危險的。切勿打開機殼，如本機未確有安全蓋時，宜立刻拉下電源插頭，再將機入本廠的維修處或委託維修站。

■ We greatly appreciate your purchase of the AVC-A1.

■ To be sure you take maximum advantage of all the features the AVC-A1 has to offer, read these instructions carefully and use the set properly. Be sure to keep this manual for future reference should any questions or problems arise.

ACCESSORIES

Check that the following parts are included in addition to the main unit:

① Operating instructions	1	④ R6P/AA batteries	2
② Service station list	1	⑤ AC power cord (for Asia model)	2
③ Remote control unit (RC-813)	1	(for Taiwan R.O.C. model)	1

1 BEFORE USING

Pay attention to the following before using this unit:

- Moving the set**
To prevent short circuits or damaged wires in the connection cords, always unplug the power cord and disconnect the connection cords between all other audio components when moving the set.
- Before turning the power switch on**
Check once again that all connections are proper and that there are not problems with the connection cords. Always set the power switch to the standby position before connecting and disconnecting connection cords.

- Store this instructions in a safe place.
After reading, store this instructions a safe place.
- Note that the illustrations in this instructions may differ from the actual set for explanation purposes.

2 CAUTIONS ON INSTALLATION

Noise or disturbance of the picture may be generated if this unit or any other electronic equipment using microprocessors is used near a tuner or TV.

If this happens, take the following steps:

- Install this unit as far as possible from the tuner or TV.
- Set the antenna wires from the tuner or TV away from this unit's power cord and input/output connection cords.
- Noise or disturbance tends to occur particularly when using indoor antennas or 300 Ω /ohms feeder wires. We recommend using outdoor antennas and 75 Ω /ohms coaxial cables.

For heat dispersal, leave at least 10 cm of space between the top, back and sides of this unit and the wall or other components.

3 CAUTIONS ON HANDLING

- Switching the input function when input jacks are not connected**
A clicking noise may be produced if the input function is switched when nothing is connected to the input jacks. If this happens, either turn down the MASTER VOLUME control or connect components to the input jacks.
- Muting of PRE OUT jacks and SPEAKER terminals**
The PRE OUT jacks and SPEAKER terminals include a muting circuit. Because of this, the output signals are greatly reduced for several seconds after the power switch is turned on or input function, surround mode or any other set-up is changed. If the volume is turned up during this time, the output will be very high after the muting circuit stops functioning. Always wait until the muting circuit turns off before adjusting the volume.

- Whenever the power switch is in the OFF state, the apparatus is still connected on AC line voltage.
Please be sure to unplug the cord when you leave home for, say, a vacation.
- Opening and closing the door**
This unit has a door on the front panel. Press the "PUSH OPEN" mark on the upper right side of the door to unlatch and open it. To close it, press it until a click is heard.

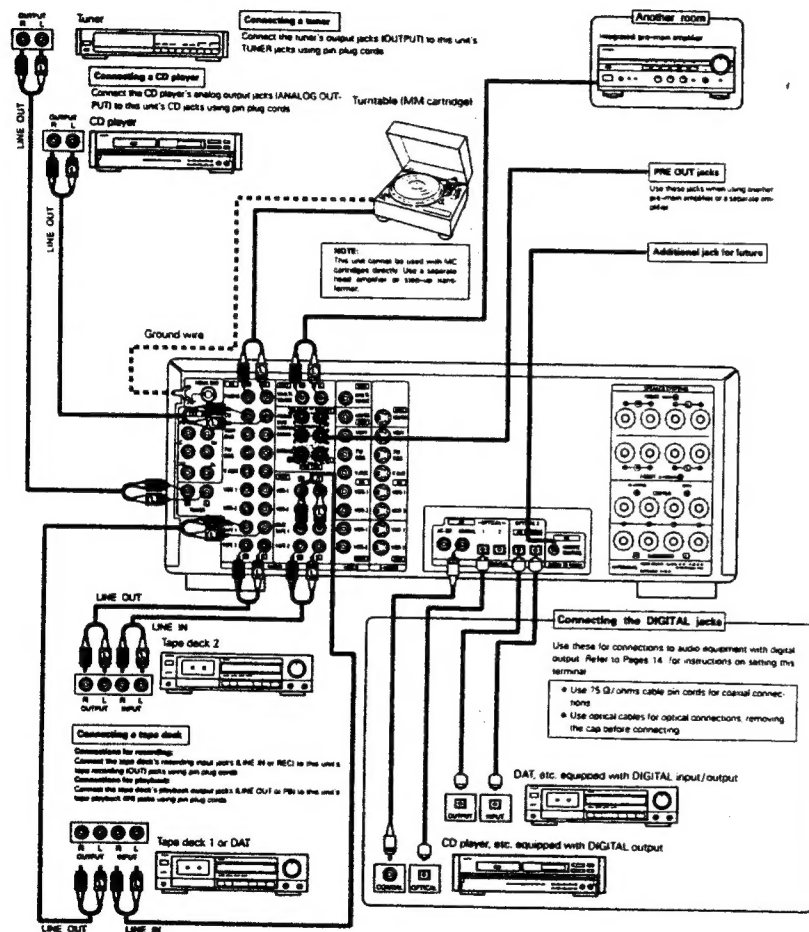

NOTE: The door opens out automatically once it is unlatched, but it may stop halfway. This is not a malfunction. In this case, pull down the door lightly to open it.

4 CONNECTIONS

- Do not plug in the power cord until all connections have been completed.
- Be sure to connect the left and right channels properly (left with left, right with right).
- Insert the plugs securely. Incomplete connections will result in the generation of noise.

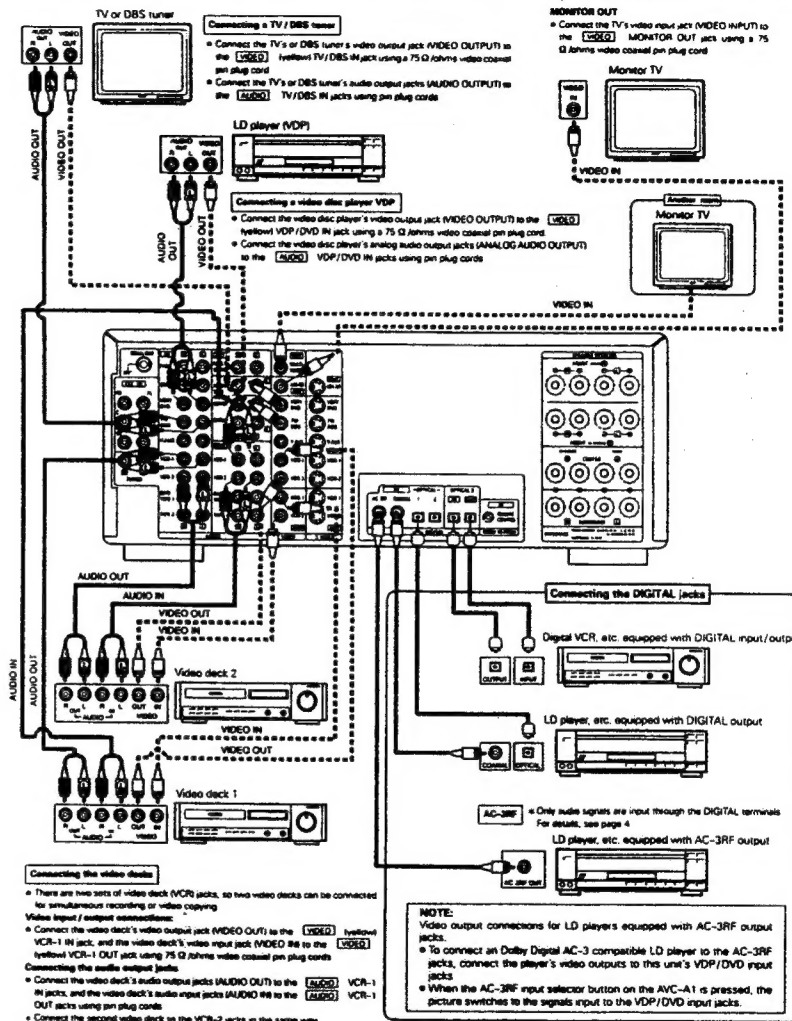

- Note that binding pin plug cords together with power cords or placing them near a power transformer will result in generating hum or other noise.
- Noise or humming may be generated if a connected audio equipment is used independently without turning the power of this unit on. If this happens, turn on the power of this unit.

4-1 Connecting the audio components

4-2 Connecting the video equipments

To connect the video signal, connect using a 75 Ω/ohms video signal cable cord. Using an improper cable can result in a drop in video quality.

4-3 Connecting the S-video jacks

• **A note on the S input jacks**

The input selectors for the S inputs and pin jack inputs work in conjunction with each other.

• **Precaution when using S-jacks**

This unit's S-jacks (input and output) and video pin jacks (input and output) have independent circuit structures, so that video signals input from the S-jacks are only output from the S-jack outputs and video signals input from the pin jacks are only output from the pin jack outputs. When connecting this unit with equipment that is equipped with S-jacks, keep the above point in mind and make connections according to the equipment's instruction manuals.

4-4 Connecting the EXT. IN jack

The EXT. IN (EXTERNAL INPUTS) jack is used for the input of multi-channel audio, such as MPEG multi-channel.

- Select the analog input using the ANALOG/DIGITAL button on the main unit.

- Press the STEREO/EXT. IN button on the main unit to set the play mode to "EXT. IN".

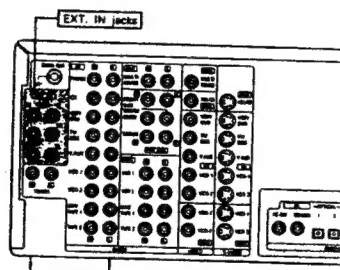

After setting, the input signals connected to the FL (Front Left), FR (Front Right), C (Center), SW (Subwoofer), SL (Surround Left) and SR (Surround Right) input jacks are output directly to the front (left and right), center, subwoofer and surround left and right speaker systems without passing through the surround circuit.

Surround input terminals

- If your component has only one surround output terminal, connect it to either the SL (surround left) or SR (surround right) terminal on the AVC-A1. The signals will automatically be divided between the left and right surround channels before being output.

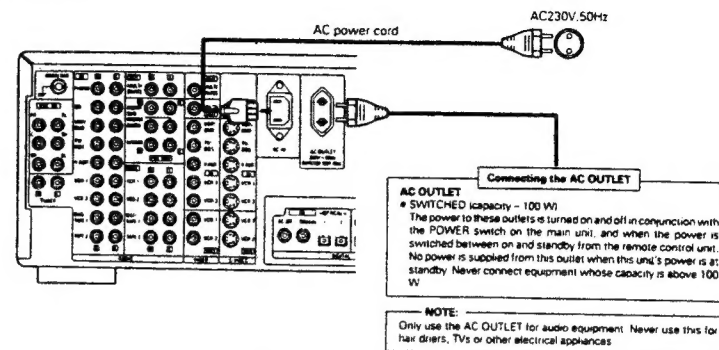

NOTES:

- This jack cannot be operated in play modes other than the "EXT. IN" mode. Also, no signals are output from channels not connected to input jacks.
- The "EXT. IN" mode can be set for any function. To enjoy together with pictures, set this mode after selecting a function to which video signals are input.

4-5 Connecting the AC power cord and AC OUTLET(S)

■ ASIA MODEL ONLY

■ TAIWAN R.O.C. MODEL ONLY

4-6 Speaker system connections

- Connect the speaker terminals with the speakers making sure that like polarities are matched (+ with +, - with -). Mismatching of polarities will result in weak central sound, unclear orientation of the various instruments, and the sense of direction of the stereo being impaired.

- When making connections, take care that none of the individual conductors of the speaker cord come in contact with adjacent terminals, with other speaker cord conductors, or with the rear panel.

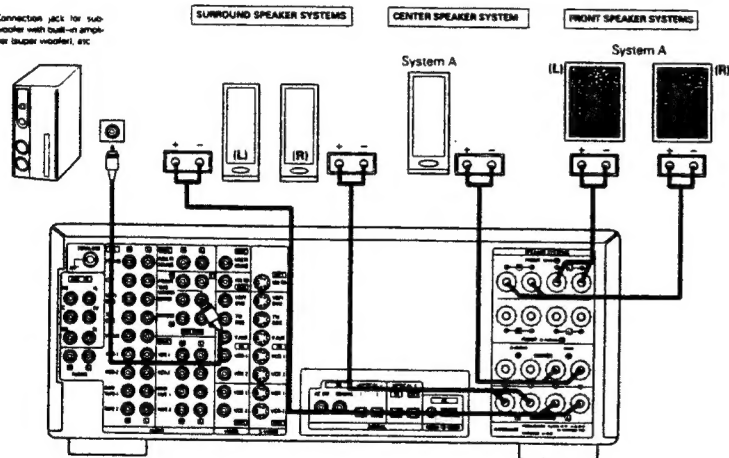

Speaker Impedance

- When speaker systems A and B are used separately, speakers with an impedance of from 8 to 16 Ω /ohms can be connected for use as front and center speakers.
- Be careful when using two pairs of front or center speakers (A + B) at the same time, since use of speakers with an impedance of less than 16 Ω /ohms will lead to damage.
- Speakers with an impedance of 8 to 16 Ω /ohms can be connected for use as surround speakers.
- The protection circuit may operate or damage may occur when speakers with an impedance outside of the above range are used.

Precautions when connecting speakers

If a speaker is placed near a TV or video monitor, the colors on the screen may be disturbed by the speaker's magnetism. If this should happen, move the speaker away to a position where it does not have this effect.

Connection jack for subwoofer with built-in amplifier (surround speaker, etc.)

CAUTION

Protective Circuit

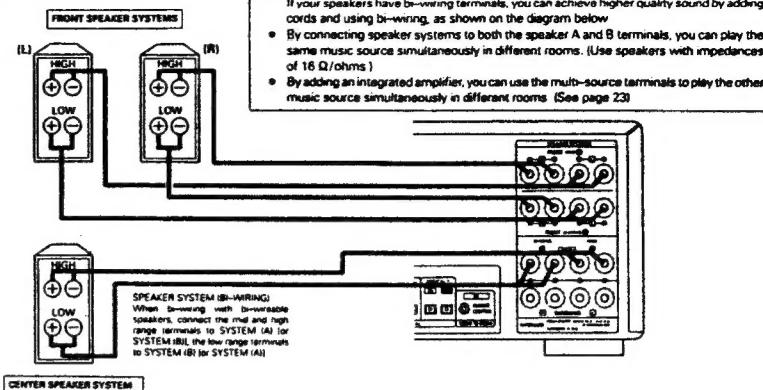

This set is equipped with a high speed protective circuit. This circuit protects the internal circuitry from damage due to large currents flowing when the speaker jacks are not completely connected or when an output is generated by a short circuit. This protective circuit's operation cuts off the output to the speakers and "PROTECT" display appears. In such a case, be sure to turn the power to the set off and check the connections to the speakers. Then turn the power on again. After muting for several seconds, the set will operate normally.

Connecting the speaker terminals

NOTE:
NEVER touch the speaker terminals when the power is on.
Doing so could result in electric shocks.

Bi-wiring procedure

5 SYSTEM SETUP

After connections with other components have been made, make the various settings on the monitor using this unit's on screen display. These settings must be made in order to complete the AV system in your listening room. (Please do not connect headphones in these settings.)

Make the seven settings described below.

- 1 Speaker Configuration
- 2 Delay Time
- 3 Channel Level
- 4 Subwoofer Peak Limit Level
- 5 Digital Inputs (only when an AV component is connected to the digital input jacks)
- 6 AC-3
- 7 On Screen Display

NOTES:

- The output from the S MONITOR OUT terminal has priority for the on screen display. If you want to always output the on screen display signals to the video output, do not connect a cable to the S MONITOR OUT terminal.
- The on screen display is not displayed for the MULTI SOURCE OUT terminal.
- This model's on screen function is designed for high resolution monitor displays. Small characters may be difficult to read on small displays or low resolution TVs.

Use the following buttons on the remote control unit to make the settings:

"ENTER" button

Press this to switch the display on the screen.
Also use this button to complete the setting on the screen.

"CURSOR" buttons

⬅ and ➡ : Use these to move the cursors (⬅ and ➡) to the left and right on the screen.
⬆ and ⬇ : Use these to move the cursors (⬆ and ⬇) up and down on the screen.

5-1 Before setting up the system

- 1 Turn on the power and press the ENTER button.
The "Menu" screen (screen 1) appears on the monitor.

- 2 Use the CURSOR buttons to specify "System Setup"

- 3 Press the ENTER button to switch the screen

The "System Setup Menu" screen (screen 2) appears on the monitor

(screen 1)

(screen 2)

5-2 Setting the speaker configuration

- 1 Use the CURSOR buttons to specify "Speaker Configuration" from the "System Setup Menu" screen (screen 2).

- 2 Press the ENTER button.

The "Speaker Configuration" screen (screen 3) appears on the monitor.

- 3 Use the CURSOR buttons and select the different types of speakers connected and their size parameters.

To select the speakers:

To select the parameters:

The selected parameters are highlighted

(screen 3)

Parameters

- Large** Select this when using speakers that can fully reproduce low sounds of below 80 Hz
 - Small** Select this when using speakers that cannot reproduce low sounds of below 80 Hz with sufficient volume.
 - When this setting is selected, low frequencies of below 80 Hz are assigned to the subwoofer
 - No** Select this when no speakers are installed.
 - Yes/No** Select "Yes" when a subwoofer is installed, "No" when a subwoofer is not installed
- * To take full advantage of the performance of the Home-THX certified speaker systems, set the front, center and surround speaker size parameters to "Small" and the subwoofer to "Yes".
- 4 After the above selections are completed, press the ENTER button again
The "System Setup Menu" screen reappears

5-3 Setting the delay time

Input the listening position and the distance of the different speakers

- 1 Use the CURSOR buttons to specify "Delay Time" from the "System Setup Menu" screen (screen 4)

- 2 Press the ENTER button

The "Delay Time" screen (screen 5) appears on the monitor

- 3 Use the CURSOR buttons to specify the unit of distance.

NOTE: The settings are reset to their initial values when switching between meters and feet

- 4 Use the CURSOR buttons to input the listening position and the distance of the different speakers (screen 6-A)

To select the speakers:

To select the distance:

* Select "Default" to return to the initial settings (refer to page 15)

- 5 After the above selections are completed, press the ENTER button again
The "System Setup Menu" screen reappears.
This procedure automatically sets the optimum surround delay time for the listening room.

(screen 4)

(screen 5)

(screen 6-A)

* Please note that the difference of distance for every speaker should be 15 ft (4.5 m) or less. If you set an invalid distance, a CAUTION notice, such as screen 6-B will appear. In this case, please relocate the blinking speaker(s) so that its distance is no larger than the value shown in highlighted line. Then press the ENTER button again.

(screen 6-B)

5-4 Setting the channel level

Use test tones to adjust the volume of the different speakers

- 1 Use the CURSOR buttons to specify "Channel Level" from the "System Setup Menu" screen. (screen 7)

- 2 Press the ENTER button

The "Channel Level" screen (screen 8) appears on the monitor

- 3 Use the CURSOR buttons to select "Test Tone Mode", then select "Auto" or "Manual".

- 4 Use the CURSOR buttons to select "Test Tone Start", then select "Yes"

- 5 a If the "Auto" mode is selected:
Test tones are automatically emitted from the different speakers.

The test tones are emitted from the different speakers in the following order, at 4-second intervals the first time and second time around, 2-second intervals the third time around and on:

Use the CURSOR buttons to adjust all the speakers to the same volume. (screen 9)

- b If the "Manual" mode is selected:
Use the cursor buttons to select the speakers from which to emit the test tones and adjust the volume. (screen 10)

To adjust the volume:

To select the speaker:

The level of each channel should be adjusted to 75 dB (C-weighted, slow meter mode) on a sound level meter at the listening position. If a sound level meter is not available adjust the channels by ear so the sound levels are the same. Because adjusting the subwoofer level test tone by ear is difficult, use a well known music selection and adjust for natural balance.

NOTE: When adjusting the level of an active subwoofer system, you may also need to adjust the subwoofer's own volume control

- 6 After the above settings are completed, press the ENTER button again

The "System Setup Menu" screen (screen 2) reappears.

To cancel the settings, select "Level Clear" and "Yes" on the "Channel Level" screen, then make the settings again.

- NOTES:
- The output channel levels for all the surround modes are set to the same conditions when the channel level setting on the system setup menu is conducted.
 - When the level clear operation is performed, all channel levels for all modes are set to 0 dB.

The test tone is emitted from the speaker whose indicator is highlighted

(screen 9)

The test tone is emitted from the speaker whose indicator is highlighted.

(screen 10)

5-5 Subwoofer Peak Limit Level Setting

This unit features a subwoofer peak limit control which prevents distortion and damage in the loudspeaker system by controlling the maximum bass volume level. With this feature you may set the maximum bass level for the system. This feature operates with or without a subwoofer in the system.

- 1 Use the CURSOR buttons to specify "Subwoofer Peak Limit Lev." from the "System Setup Menu" screen. (screen 11)

- 2 Press the ENTER button

The "Subwoofer Peak Limit Level Setting" screen (screen 12) appears

- 3 Use the left CURSOR button to select "ON"

The screen changes (screen 13)

- 4 Use the CURSOR buttons to select "Setting Start" and "Yes"

The screen changes (screen 14) and a test noise is output from the subwoofer. (Clear the subwoofer's peak limit level setting by specifying "Peak Limiter" and "OFF")

- 5 Use the right CURSOR button to increase the test noise output level until the loudspeaker system's bass sound is distorted. Bass distortion can be heard as an obvious overload. When you hear that the bass sound is distorted, press the down CURSOR button

This unit automatically sets the subwoofer peak limit level so the bass level will never be louder than the test noise signal.

CAUTION!

- The master volume is set to "0" when test tones are output.
- The test tones are for confirming the low frequency playback limits and are played at an extremely high level. When using a low output subwoofer, be very careful about irregular operations exceeding clipping by for example turning down the subwoofer's attenuator before starting then slowly turning the attenuator up to the listening level. Also, when the subwoofer is set to "No" in the speaker configuration, the test tones are output from the front speakers. When using front speakers with low input power handling, check that the sound is not clipped at sections where the signal is strong on the CD music source before starting the peak limit setting. The peak limit setting should not be performed if the music source cannot be played with the master volume set at "-15". Set the front speakers to "Small" and the subwoofer to "Yes" in the speaker configuration. When this is done, the low frequencies are cut, so the effect is insufficient. We strongly recommend adding a subwoofer.
- If the test tone is clipped when it is set to "-18 dB", set the peak limit to "-18 dB". In this case, the input power handling of the subwoofer or front speakers is insufficient so clipping may occur when playing music. We recommend switching to a subwoofer with a higher input power handling.

5-6 Digital inputs setup

Input the types of components connected to the digital input terminals.

- 1 Use the CURSOR buttons to specify "Digital Inputs" from the "System Setup Menu" screen (screen 15)

- 2 Press the ENTER button

The "Digital Inputs Setup" screen appears (screen 16)

- 3 Use the cursor buttons to input the types of components connected to the digital input terminals.

To select the input terminal:

To select the type of component:

* Select "OFF" if nothing is connected

Select "Default" to return to the initial settings (refer to page 15)

- 4 After the above settings are completed, press the ENTER button again. The "System Setup Menu" screen reappears.

NOTES:

- OPTICAL-3 INPUT is equipped with optical output for digital recording to DAT, MD or Digital VCR. Connect the optical recording devices to the input/output of OPTICAL-3 for digital recording. For "OPTICAL-3", CD, VDP/DVD, TV/DBS and V.AUX cannot be set.
- When you connect such a recording device to OPTICAL-3 OUTPUT, the output of the device is allowed to be connected only to OPTICAL-3 INPUT. Invalid connection may cause a trouble, such as noise arising or serious damage to loudspeakers or amplifiers, etc.
- PHONO, TUNER and TAPE-2 cannot be selected at "digital input terminal setting".

5-7 Dolby Digital AC-3

When playing Dolby Digital AC-3 sources, the input level is corrected automatically. Set the dialog normalization function.

- 1 Use the CURSOR buttons to specify "AC-3" from the "System Setup Menu" screen (screen 17)

- 2 Press the ENTER button

The "AC-3" screen appears (screen 18)

- 3 Use the CURSOR buttons to select "ON" or "OFF"

- 4 After the above settings are completed, press the ENTER button again. The "System Setup Menu" screen reappears

When playing Dolby Digital AC-3 sources

NOTE: If dialog normalization is set to "OFF", it may not be possible to set the master volume to greater than -5 dB, depending on the number of speakers and the output channel level setting in the HOME THX CINEMA mode as well, even if dialog normalization is set to "ON", it may not be possible to set the master volume to greater than -5 dB depending on the above conditions

5-8 On Screen Display

"ON" or "OFF" can be selected for functions other than the ones on the menu screen

- 1 Use the CURSOR buttons to specify "On Screen Display" from the "System Setup Menu" screen (screen 19)

- 2 Press the ENTER button

The "On Screen Display" screen (screen 20) appears on the monitor

- 3 Use the CURSOR buttons to select "ON" or "OFF"

- 4 After the above settings are completed, press the ENTER button again. The "System Setup Menu" screen reappears

* This completes the system setup operations. Once the system is set up, there is no need to make the settings again unless other components or speakers are connected or the speaker layout is changed.

5-9 Operation after completing system setup

- 1 Use the CURSOR buttons to specify "Setup Menu Off" from the "System Setup Menu" screen (screen 21)

- 2 Press the ENTER button twice to turn off the on screen display

SYSTEM SETUP DEFAULT VALUE

① Speaker Configuration	Front Sp Small	Center Sp Small	Surround Sp Small		Subwoofer
	FL & FR	Center	Sur L	Sur R	Subwoofer
	12 ft (3.6 m)	12 ft (3.6 m)	10 ft (3.0 m)	10 ft (3.0 m)	12 ft (3.6 m)
② Delay Time	FL	FR	Center	Sur L	Sur R
	0 dB	0 dB	0 dB	0 dB	0 dB
③ Channel Level	FL	FR	Center	Sur L	Sur R
	0 dB	0 dB	0 dB	0 dB	0 dB
④ Subwoofer Peak Limit Lev	Peak Limiter OFF				
⑤ Digital Inputs	COAXIAL	OPTICAL-1	OPTICAL-2	OPTICAL-3	
	CD	TV/DBS	VDP/DVD	TAPE-1	
⑥ AC-3	Dialog Normalization ON				
⑦ On Screen Display	ON				

Playback with the above setting is possible upon shipment from the factory and after initializing (refer to page 30)

6 REMOTE CONTROL UNIT

Following the procedure outlined below, insert the batteries before using the remote control unit.

Range of operation of the remote control unit

Point the remote control unit at the remote control sensor as shown on the diagram at the left

NOTES:

- The remote control unit can be used from a straight distance of approximately 7 meters/20 feet, but this distance will shorten or operation will become difficult if there are obstacles between the remote control unit and the remote control sensor, if the remote control sensor is exposed to direct sunlight or other strong light, or if operated from an angle.
- Neon signs or other devices emitting pulse-type noise nearby may result in malfunction, so keep the set as far away from such devices as possible.

Inserting the batteries

- Open the bottom cover of the remote control unit and remove the battery cover.

- Insert the two R6P/AA batteries, matching the + and - marks on the batteries with those in the case. Close the bottom cover until it clicks shut.

NOTES:

- Use only AA, R6P, UM-3 batteries for replacement.
- Be sure the polarities are correct. (See the illustration inside the battery compartment.)
- Remove the batteries if the remote control transmitter will not be used for an extended period of time.
- If batteries leak, dispose of them immediately. Avoid touching the leaked material or letting it come in contact with clothing, etc. Clean the battery compartment thoroughly before installing new batteries.
- Have replacement batteries on hand so that the old batteries can be replaced as quickly as possible when the time comes.
- The codes that have been learned may be lost if removed batteries are not replaced within about 5 minutes.

6-1 System code buttons

DENON remote-controllable audio components can be controlled using this unit's remote control unit. Note that some components, however, cannot be operated with this remote control unit.

- Set to slide switch to "AUDIO" ("AVR/AVC").

- Set the slide switch to the position for the component to be operated (CD, DECK or DAT). The tuner can be operated in any position.

- Use the buttons shown below to operate the audio component. For details, refer to the respective component's manual.

a. For CD players and DATs

Manual search (reverse and forward)
Stop
Play
Auto search
Pause
DISC SKIP + : Disc selection (CD changer only)

b. For tape decks (DECK)

Reverse
Forward
Stop
Forward play
Pause
A/B : A/B deck selection
Reverse play
- For tuner

c. For tuner

SHIFT : Preset channel range selection
CHANNEL : Preset channel up/down
+ -

TUNING : Tuning up/down
BAND : AM/FM reception band selection
MODE : AUTO/MONO selection
MEMORY : Preset memory

* These buttons does not function.
(These buttons can be used by using the preset memory or the learning function.)

6-2 Preset memory

DENON and other makes of components can be operated by setting the preset memory for your make of video component. Operation is not possible for some models, however. In this case use the learning function (see page 19) to store the remote control signals. For instructions on clearing the preset settings stored in the preset memory, see page 20.

- Set the slide switch to "VIDEO".

- Set the slide switch to the component to be registered (VDP, VCR or TV).

(Keep the POWER button pressed in when performing steps 3 and 4)

- Holding in the POWER button, press the button for the corresponding manufacturer in block A. (Refer to Table 6-2.)

The LEARNED/TX LED flashes.

- Next, while holding in the POWER button, press the button for the code in block B. (Refer to Table 6-2.) The operation is completed when the LEARNED/TX LED lights.

- To continue registering other components, repeat steps 2 to 4.

This remote control unit can be used to operate components of other manufacturers without using the learning function by registering the manufacturer of the component as shown on Table 6-2.

NOTES:

- The signals for the pressed buttons are emitted while setting the preset memory. To avoid accidental operation, cover the remote control unit's transmitting window while setting the preset memory.
- Some models and years of manufacture of components of the manufacturers listed on Table 6-2 cannot be used.

6-3 Operation after components are registered

- Set the slide switch to "VIDEO".

- Set the slide switch to the component to be registered (VDP, VCR or TV).

- Use the buttons shown below to operate the video component. (Some models cannot be used.) For details, refer to the respective component's manual.

a. VDP

- POWER : Power on/off
 << >> : Manual search (reverse and forward)
 ■ : Stop
 ▶ : Play
 << >> : Auto search
 ■ : Pause

b. VCR

- POWER : Power on/off
 << >> : Manual search (reverse and forward)
 ■ : Stop
 ▶ : Play
 ■ : Pause
 CHANNEL : Channel selection
 +, -

c. TV

- POWER : Power on/off
 VOLUME : Volume up/down
 ▲, ▼ : TV/VCR
 CHANNEL : Channel selection
 +, -

6-4 Remote control unit learning function

If your AV components are not DENON products or if operation is not possible with the preset memory settings, the components' remote control signals can be "learned" to enable remote control operation.

The buttons that can be "learned" are the CD, DAT and DECK system buttons (see page 16) and the VDP, VCR and TV system buttons (see page 18). (For the TV only, the A block buttons can also be "learned".)

- Press the USE/LEARN selector button with the tip of a pen etc., to set the learn mode. Both the START and LEARNED/TX indicators flash.

This unit's remote control unit

- Set the program switch to the side to be "learned". Set to the AUDIO side for the CD, tape deck or DAT position, to the VIDEO side for the VDP, VCR or TV position.

AUDIO

- Set the program switch to the position to be "learned".

VIDEO

- Set the remote control units so they are facing each other, then press the button to be "learned" on this unit's remote control unit.

The two LEDs start flashing again.

- Once the learning operation is completed, press the USE/LEARN selector button again. The two LEDs stop flashing and the learning mode is cancelled.

NOTE: Use button ⑪ / 0 as the 0 number button, button ⑫ / E as the enter button.

NOTES:

- Up to 26 codes can be "learned", but this number may be lower if the codes are long.
- If a non-learnable button is pressed or two or more buttons are pressed at once, the two LEDs will once again light when the button(s) is released.
- If the codes could not be stored, the LEARNED/TX LED does not light after the START LED turns off. For limited number of models, codes cannot be stored in RC-613.
- If the two LEDs start flashing rapidly after the START LED lights, this means that the memory is already full, and the code you have just attempted to store was not stored. To "learn" that code, first perform the resetting operation.

- Check that the START LED is lit, then press the button to be "learned" on the other remote control unit.

- Once the START LED turns off and the LEARNED/TX LED lights, release the button on the other remote control unit.

The two LEDs start flashing again.

- To "learn" other buttons, repeat steps 2 to 6.

- Once the learning operation is completed, press the USE/LEARN selector button again. The two LEDs stop flashing and the learning mode is cancelled.

Check that the stored codes work properly.

6-5 Clearing "learned" remote control signals and the preset memory settings

- 1 Press the USE/LEARN selector button with the tip of a pen, etc., to set the learn mode

- 2 To clear "learned" remote control signals, set the slide switch to the position at which the signals were "learned". To clear the preset memory settings, set the slide switch to "VIDEO".

- 3 Set the slide switch to the position at which the signals were "learned" or at which the preset memory settings were set

- 4 Press the SYSTEM CALL SET button, and hold it in for at least four seconds.

- 5 When both the START and LEARNED / TX LEDs light simultaneously, all the stored codes are cleared.

- 6 Press the USE/LEARN selector button.

7 OPERATIONS

7-1 Preparations for playback

- 1 Check that all connections are proper.
- 2 Set to the center position.

- 3 Set the remote control unit's slide switch to the AUDIO position. (only when operating with the remote control unit)

- 4 Turn on the power. Press the POWER switch (button).

ON/STANDBY

The power turns on and "ON/STANDBY" indicator is lit. Several seconds are required from the time the power switch is set to the "ON" position until sound is output. This is due to the built-in muting circuit that prevents noise when the power switch is turned on and off. Set the POWER switch to this position to turn the power on and off from the included remote control unit (RC-813).

OFF

The power turns off and "ON/STANDBY" indicator is off. In this position, the power cannot be turned on and off from the remote control unit.

7-2 Playing the analog program source

- 1 Press the button for the program source to be played EX: CD

- 2 Select the ANALOG input.

Check that the "DIGITAL" indicator is off. If it is lit, press the button to switch the mode.

- 3 Select the STEREO or EXT IN mode

The play mode switches in the following order each time the STEREO/EXT IN button on the main unit is pressed:

* EXT IN mode

This mode is for playing the multi-channel audio signals of an MPEG multi-channel decoder, etc., connected to the main unit's EXT IN jacks (refer to page 8).

- 4 Start playback on the selected component. For operating instructions, refer to the various components' manuals.

- 5 Adjust the MASTER VOLUME control.

7-3 Playing the digital program source

- 1 Press the button for the program source to be played that is connected to the digital input jacks. EX: CD

- 2 Select the DIGITAL input.

- 3 Check that the "DIGITAL" indicator is lit red.

When digital signals are input properly, the DIGITAL indicator switches from red to green.

- * If the indicator is not lit green, check that the system setup's input setting (refer to page 14) and the connections are proper, that the component's power is turned on, etc.

- 4 Start playback on the selected component. For operating instructions, refer to the various components' manuals.

- 5 Adjust the MASTER VOLUME control.

NOTE: If a CD-ROM is played, the "DIGITAL" indicator is lit green but no sound is heard

7-4 Adjusting the TONE control

1. Adjust the BASS and TREBLE.

Turn the control clockwise to increase the bass or treble, counter-clockwise to decrease it.

2. Select the DIRECT mode if there is no need to adjust the sound.

7-5 Simulcast playback

Use this switch to monitor a video source other than the audio source.

1. Press the VIDEO SELECT button repeatedly until the desired source appears on the display.

* Cancelling simulcast playback.

- Select "SOURCE" using the video select button.
- Switch the program source to the component connected to the video or AC-3RF input.

7-7 Listen with headphones

Connect the headphones to the PHONES jack. The pre-out output (including the speaker output) is automatically turned off when headphones are connected.

NOTE:

To prevent hearing loss, do not raise the volume level excessively when using headphones.

7-8 On screen display

Each time an operation is performed, a description of that operation appears on the display connected to the unit's VIDEO MONITOR OUT terminal. Also, the unit's operating status can be checked during playback by pressing the remote control unit's ON SCREEN button.

Such information as the position of the input selector and the surround parameter settings is output in sequence.

7-9 Front panel display

Descriptions of the unit's operations are also displayed on the front panel display. In addition, the display can be switched to check the unit's operating status while playing a source by pressing the PANEL button.

7-6 Using the muting function

Use this to turn off the audio output temporarily.

1. Press the MUTE button.
- * Cancelling MUTE mode: Press the MUTE button again.

7-10 Using the dimmer function.

Use this to change the brightness of the display. The display brightness changes in four steps (bright, medium, dim and off) by pressing the remote control unit's DIMMER button repeatedly.

7-11 Multi-source REC OUT recording / playback

While listening to or watching the currently playing program source, you can record another program source (REC OUT mode), or by connecting the input jacks of an amplifier, etc., located away from the AVC-A1 (for example in another room) to the MULTI SOURCE output jacks, you can output the program source to the other location (room) (MULTI mode).

■ Recording a source other than the one currently playing (REC OUT mode)

1. Press the REC/MULTI MODE button until "REC OUT SOURCE" appears on the display.
2. Select the source to be output to the recording output terminal. Press the REC/MULTI SOURCE button repeatedly until the desired source appears on the display.

The indicator of the selected program source lights on the display at this time.

3. Set to the audio or video recording mode. For operating instructions, refer to the manuals of the components to be used for audio or video recording.

- * The signals of the source except the digital input selected with the REC OUT mode are also output from the MULTI SOURCE AUDIO/VIDEO OUT terminals.
- * Digital signals are only output from the recording output terminals and MULTI SOURCE OUT terminals after conversion into analog signals when playing the digital input in the stereo mode.
- * To cancel the REC OUT mode: Press the REC/MULTI MODE button or the REC/MULTI SOURCE button repeatedly until "SOURCE" appears on the display.

■ Playing a source other than the one currently playing in a different room (MULTI mode)

1. Press the REC/MULTI MODE button repeatedly until "M-SOURCE" appears on the display.
2. Select the source to be output to the MULTI SOURCE output terminal. Press the REC/MULTI SOURCE button repeatedly until the desired source appears on the display. The indicator of the selected program source lights on the display at this time. The "MULTI" indicator lights on the display at this time.

- * When the MULTI button on the remote control unit is pressed, the source to be output from the MULTI SOURCE terminals can be selected. (This cannot be selected when the main unit is in the REC OUT mode.)
- * The digital signals are not output from the MULTI SOURCE AUDIO/VIDEO OUT terminals.
- * To cancel the MULTI mode: Press the REC/MULTI MODE button or the MULTI button on the remote control unit repeatedly until "SOURCE" appears on the display.

■ Multi-source and multi-room playback

By connecting another pre-main amplifier, etc., to the MULTI SOURCE [OUT] jacks, you can listen to a source other than the one in the main room in other room. To connect the video signal, use a 75 Ω /ohms cable designed specifically for video signals. Using an improper cable can result in a drop in sound quality.

NOTE:

The signals of the source selected in the MULTI mode are also output from the DAT/TAPE-1 and VCR recording output terminals.

7-12 System call (remote control unit)

This function allows you to preset frequently used operation patterns in the remote control unit then automatically send a series of up to ten remote control codes with a single button.

Presetting

1. Press the SET button

2. Press the buttons for the codes to be sent, changing the position of the slide switch as necessary (Up to ten buttons can be set). Buttons which have been "learned" and buttons which have been preset can also be selected.

3. Press the SYSTEM CALL button ("1" or "2") at which you want to store the codes. The setting is now stored.

Recalling

4. Press the SYSTEM CALL button ("1" or "2") at which the desired codes have been stored. The series of codes is now sent.

8 USING THE SURROUND FUNCTION

8-1 Dolby Surround & Home THX Cinema Surround

This unit is equipped with digital signal processing sections for decoding and reproducing movie soundtracks the same way as in movie theaters.

8-1-1 Dolby Surround

1. DOLBY SURROUND PRO LOGIC

When using conventional video tapes, laser discs, TV programs or CDs with the mark, Dolby Pro Logic provides extremely natural sound movement and positioning, immersing you in the on screen action. Pro Logic uses a directional emphasis circuit to decode four output channels (front left and right, center, and surround) from the two audio channels provided on the software.

2. DOLBY DIGITAL

When you connect an LD player with an AC-3 RF output and play laser discs with the mark, you can experience improved sound spatiality, positioning, and impact compared with Pro Logic. This is because Dolby Digital delivers up to 5 totally discrete, full frequency audio channels (front left and right, center, and surround left and right), plus a bass-only effects channel. Since the signal is digital from the input of the program source unit to the output of this unit, a high-quality and clarity of surround sound results.

Dolby Digital is a system developed by Dolby Laboratories that transmits 5.1 channels of digital signals. The surround system developed for movie theaters using this system is called "Dolby SR-D (Surround Digital)". Whereas the conventional Dolby Pro Logic Surround is an analog matrix system, Dolby SR-D is a digital discrete system in which the different channels are completely independent. This makes it possible to achieve a realistic sound field with a "three-dimensional" feel, giving the sound a sense of distance, movement and relative position, and creating a surprisingly real and powerful sense of presence when playing movie software in AV rooms. There are "5.1 ch" playback channels: three front channels (front left, center and front right), two surround channels (surround left and surround right), plus "0.1 channel" called LFE (Low Frequency Effect) for low bass effect sounds of 120 Hz or less. The signals are recorded on the software in fully discrete fashion, eliminating crosstalk between channels and making it possible to control the sound field in the listening/viewing space with greater precision.

In addition, the frequency range of the five channels extends up to 20 kHz, (the same as CDs), resulting in clear sound with greater richness of expression. Also, Dolby Digital will be used on DVDs, the next generation AV medium.

● Dolby Digital and Pro Logic

Home surround method	Dolby Digital	Dolby Pro Logic
No. recording channels (maximum)	5.1 ch	2 ch
No. playback channels	5.1 ch	4 ch
Playback channels	L, R, C, SL, SR and SSW	L, R, C, S (SW recommended)
Audio processing	Digital discrete processing, AC-3 encoding/decoding	Analog matrix processing, Dolby Surround
Upper reproduction limit of surround channel	20 kHz	7 kHz

Manufactured under license from Dolby Laboratories Licensing Corporation. "Dolby," "AC-3," "Pro Logic" and the double-D symbol are trademarks of Dolby Laboratories Licensing Corporation. Copyright 1992 Dolby Laboratories, Inc. All rights reserved.

8-1-2 Home THX Cinema surround

Use the HOME THX CINEMA mode along with the Dolby Surround processing described above to experience movie sound in your own listening room that matches what you would hear in the best movie theater or movie production studio. Use the HOME THX CINEMA mode for all movies on disc, tape, or television broadcast. For optimal multichannel sound performance, we recommend the use of THX loudspeaker systems. This model's HOME THX CINEMA mode is based on the THX 5.1 format.

THX 5.1 is a format proposed by the Lucasfilm Company for achieving in the home the same sound effects reproduced in movie theaters. It produces the same acoustic characteristics as on the dubbing stage through further digital processing of the Dolby Digital's 5.1 channel digital signals in order to correct for the differences between the acoustic characteristics of movie theaters created on the dubbing stage when producing the sound track and the acoustic characteristics of home audio equipment. Thanks to this, the sound image when watching movie software in your AV room at home is nearer the image the movie's producer was aiming for in movie theaters and the sound field is better matched to the picture. The HOME THX CINEMA mode creates a more real world of sound and picture for your home theater.

Manufactured under license from Lucasfilm Ltd. U.S. patent numbers 5,043,970; 5,189,703; and 5,222,059. Foreign patents pending. Lucasfilm and THX are registered trademarks of Lucasfilm Ltd.

8-2 Before playing with the surround function

Before playing with the surround function, be sure to use the test tones to adjust the playback level from the different speakers. This adjustment can be performed with the system setup (see page 12) or from the remote control unit, as described below. Adjusting with the remote control unit using the test tones is only possible in the "Auto" mode and only effective in the DOLBY SURROUND PRO LOGIC and HOME THX CINEMA modes. The adjusted levels for the different modes are automatically stored in the memory.

1. Press the T TONE button

2. Test tones are output from the different speakers. Use the channel volume adjust buttons to adjust so that the volume of the test tones is the same for all the speakers.

3. After completing the adjustment, press the T TONE button again.

After adjusting using the test tones, adjust the channel levels either according to the playback sources or to suit your tastes, as described below.

1. Press the (CH) SELECT button to select the speaker to be adjusted.

2. Adjust the level of the selected speaker.

1. Set the DOLBY SURROUND PRO LOGIC mode

1. Set the DOLBY SURROUND PRO LOGIC mode

2. If necessary, adjust the input level when analog sources are used to obtain maximum dynamic range without overload

- * For digital input sources, there is no need to adjust the input level (These buttons will not operate and the indicator will not light.)
- * The current input source, input level, etc., can be checked on the on-screen display. (screen 22)

3. Play a program source with the  **PLAY** button or  **STOP** button mark. For operating instructions, refer to the various components' manuals.

8-4 Using the Dolby Digital AC-3 mode

1. Switch the audio input to AC-3RF input (a) or digital input (b).
The VDP picture is linked to the AC-3RF signals.

- a. **AC-3RF (VDP AUTO or VDP AC-3RF) input**
Select the AC-3 RF input.

(screen 22)

This input mode makes it possible to play the Dolby Digital AC-3 audio, digital audio or analog audio signals recorded on the source by switching between the priority and fixed modes for the AC-3RF, digital optical/coaxial or analog input jacks with the VDP/DVD function.

- VDP AUTO When AC-3RF signals and digital and analog signals are input from the LD, the signals are automatically selected with the following priority: AC-3RF → digital or analog.
- VDP AC-3 RF AC-3RF fixed input.

NOTES:

- In the "VDP AUTO" mode, when an LD with the Dolby Digital AC-3 audio is detected, the decoder switches automatically and the Dolby Digital AC-3 audio is played. Also, in any mode other than normal LD player playback, no Dolby Digital AC-3 signals are detected, so the mode automatically switches to PCM or analog audio.
- In the "VDP AUTO" mode, when the mode changes from pause, chapter search, etc., to playback during playback of the Dolby Digital AC-3 audio on an LD, the PCM or analog sound may be output momentarily before the mode is switched to the Dolby Digital AC-3 audio mode. If this happens, the sound will not be interrupted if you switch to the "VDP AC-3RF" (AC-3RF fixed input mode).
- The AC-3RF input mode setting is reset to "VDP AUTO" when the power is turned off (the power switch on the remote control unit or on the main unit).

- b. Digital input**
Select the digital input. Refer to page 21, 7-3, 1, 2 and 3.

- 2 Set the DOLBY SURROUND PRO LOGIC mode

Also, the following indicator lights if the software contains Low Frequency Effect sounds:

- 4-1 Adjust the sound for the program source using the on screen display.

- 4-2 Press the ENTER button.

- 4-3 Use the CURSOR buttons to specify "Surround Parameters" (screen 23)

- 4-4 Press the ENTER button to switch the screen

5. Use the **CURSOR** buttons to move the cursor on the screen and set the parameters. (screen 24)

6. After the above settings are completed, press the ENTER button.

NOTES:-

- With the this model, Dolby Digital encoded signals can only be played in the DOLBY SURROUND PRO LOGIC, DOLBY DIGITAL AC-3, DIRECT and STEREO modes. Other surround mode buttons will not function during the Dolby Digital signal playback.
- When the mode is switched to Dolby Digital encoded signals while playing PCM digital signals or analog signals in the MONO, ICH STEREO, SUPER STADIUM, ROCK ANEMA, JAZZ CLUB, CLASSIC CONCERT or MATRIX surround mode, the mode is forcibly switched to the DOLBY SURROUND PRO LOGIC mode.

■ Surround parameters

- CINEMA EQ** Use "CINEMA equalizer" if dialogue audio track sound scratchy when playing movie software. (The higher frequency component is lowered.) (Only effective in the DOLBY SURROUND PRO LOGIC, DOLBY DIGITAL modes.)
- D. COMP** "Dynamic Range Compression" compresses the dynamic range. This is only effective for Dolby Digital program sources.
- There are four parameters: "OFF" -- "LOW" -- "MID" (MIDDLE) -- "HI" (HIGH)

NOTE: When "Default" is selected and the  cursor button is pressed, "CINEMA EQ." and "D.COMP." are automatically set to "OFF".

(screen 23)

(screen 24)

8-5 Using the Home THX Cinema mode with Dolby Surround Pro Logic

- 1 Set the HOME THX CINEMA mode

Select the HOME THX CINEMA mode for all movies on disc, tape, or television broadcast. This mode is activated simultaneously with either DOLBY SURROUND PRO LOGIC or DOLBY DIGITAL. The THX processing will allow you to hear the sound as if you were in the best movie theater or movie production studio.

- 2 If necessary, adjust the input level when analog sources are used to obtain maximum dynamic range without overload (screen 25)

Set so that the indicator does not light at places where the volume is high.

- * For digital input sources, there is no need to adjust the input level (These buttons will not operate and the indicator will not light.)
- * The current input source, input level, etc., can be checked on the on screen display.

- 3 Play a program source with the **DOLBY SURROUND PRO LOGIC** or **DOLBY DIGITAL** mark

8-6 Using the Home THX Cinema mode with Dolby Digital AC-3

- 1 Select AC-3 RF input (refer to page 26) or digital input (refer to page 21)

- 2 Set the HOME THX CINEMA mode

- 3 Play a program source with the **DOLBY DIGITAL** mark or a program source with Dolby Digital formats. The indicators below showing the signals included in the software light. (The number of channels differs according to the software.)

L: Front Left ch
C: Center ch
R: Front Right ch

SL: Surround Left ch
S: Mono Surround ch
SR: Surround Right ch

(This only lights when the surround signals are monaural.)

Also, the following indicator lights if the software contains Low Frequency Effect sounds:

8-7 DSP surround simulation

This unit is equipped with a high precision D S P (Digital Signal Processor) for processing signals digitally to simulate sound fields. Select the surround mode according to the playback source and adjust the parameters according to the conditions in the listening room to achieve realistic venue ambience.

These surround modes can be used with program sources not recorded in Dolby Surround Pro Logic or Dolby Digital except WIDE SCREEN mode.

Types of surround modes and their characteristics

1	WIDE SCREEN	Use this to enjoy program sources, with the atmosphere of a movie theater. This mode is suited for program sources recorded in Dolby Surround Pro Logic or Dolby Digital.
2	MONO	Use this when playing monaural signals, for example AM broadcasts or news programs.
3	SOH STEREO	The signals of the left and right channels are distributed to the different speakers to achieve a stereo sound from all directions at the listening position.
4	SUPER STADIUM	Use this to enjoy program sources such as football or baseball games with the atmosphere of a stadium.
5	ROCK ARENA	The powerful reverberations of this mode produce a sound field which recreates the excitement of live concerts. This mode is effective for rock, popular music, etc.
6	JAZZ CLUB	This mode creates the sound field of a live house with a low ceiling and hard wall reverberations. The result is that the artist seems to be performing right before your eyes.
7	CLASSIC CONCERT	This mode creates a sound field simulating a large concert hall, rich in reverberation. This mode is characterized by composed acoustics, and is perfect for playing classical music, etc.
8	MATRIX	Use this to enjoy stereo music sources with rich reverberations.

* Depending on the program source being played, the effect may not be very noticeable.

In this case, try other surround modes, without worrying about their names, to create a sound field suited to your tastes.

Personal Memory Plus function ... for EASY USE

This unit automatically stores the surround mode adding selected effects for all input sources. The corresponding surround mode is recalled automatically each time an input source is selected.

8-8 Using the DSP surround simulation

- 1 Select the surround mode according to the input source

The surround mode switches in the following order each time the DSP SIMULATION button is pressed:

SUPER STADIUM → ROCK ARENA → JAZZ CLUB
MATRIX ← CLASSIC CONCERT ←

- 2 Press the ENTER button and call out the "Menu" screen from the on screen display.

- 3 Use the CURSOR buttons to specify "Surround Parameters" (screen 26)

- 4 Press the ENTER button. The screen switches.

- 5 Move the cursor on the screen and make the various settings (screen 27)

- 6 After the above settings are completed, press the ENTER button.

(screen 26)

(screen 27)

Surround modes and parameters

- CINEMA EQ.** Use "CINEMA equalizer" if dialogues sound scratchy when playing movie software. (The higher frequency component is lowered.) (Only effective in the DOLBY SURROUND PRO LOGIC, DOLBY DIGITAL AC-3 and WIDE SCREEN modes.)
- ROOM SIZE** "ROOM SIZE" refers to the size of the sound field. — There are five parameters: "small" → "med.s." → "medium" → "med.l." → "large"
- EFFECT LEVEL** "EFFECT LEVEL" refers to the strength of the effect sounds. If the sound becomes distorted, lower the level. Parameter "1" → "15"
- DELAY TIME** This can be set to between 0 and 360 msec for the MATRIX mode.
- D. COMP.** "Dynamic Range Compression" compresses the dynamic range. This is only effective for Dolby Digital program sources. — There are four parameters: "OFF" → "LOW" → "MID" (MIDDLE) → "HI" (HIGH)

NOTE: When "Default" is selected and the cursor button is pressed, "CINEMA EQ." and "D. COMP." are automatically set to "OFF". "ROOM SIZE" is set to "medium", "EFFECT LEVEL" is set to "10" and "DELAY TIME" is set to "30 msec".

Surround modes and parameters

MODE	OUTPUT CHANNEL				PARAMETER SOURCE (Symbol)			
	FRONT L/R	CENTER	SURROUND	SUBWOOFER	CINEMA EQ	ROOM SIZE	EFFECT LEVEL	DELAY TIME
DIRECT	○	●	●	●	●	●	●	●
STEREO	○	●	●	●	●	●	●	●

- : Signal present or controllable.
△ : Select one according to the speaker configuration setting.

- : Can be turned on and off according to the speaker configuration setting.
× : No signal or not controllable

* When the front speakers are large, no signals are output to the subwoofer, regardless of the speaker settings.

9 LAST FUNCTION MEMORY

- This unit is equipped with a last function memory which stores the input and output setting conditions as they were immediately before the power is switched off. This function eliminates the need to perform complicated resettings when the power is switched on.
- The unit is also equipped with a back-up memory. This function provides approximately one week of memory storage when the main unit's power switch is off and with the power cord disconnected.

10 INITIALIZATION OF THE MICROPROCESSOR

When the indication of the display is not normal or when the operation of the unit does not show the reasonable result, the initialization of the microprocessor is required by the following procedure.

- Switch off the unit using the main unit's power switch.
- Hold the following AC-3 RF button and PHONO button, and turn the main unit's power switch on.
- Check that the entire display is flashing with an interval of about 1 second, and release your fingers from the 2 buttons and the microprocessor will be initialized.

11 TROUBLESHOOTING

If a problem should arise, first check the following:

- Are the connections correct?
- Have you operated the amplifier according to the Operating Instructions?
- Are the speakers, turntable, and other components operating properly?

If this unit is not operating properly, check the items listed in the table below. Should the problem persist, there may be a malfunction. Disconnect the power immediately and contact your store of purchase.

Symptom	Cause	Measures	Page
DISPLAY not lit and sound not produced when power switch set to on	• Power cord not plugged in securely	• Check the insertion of the power cord plug • Turn the power on with the remote control unit after turning the POWER switch on	7 20
DISPLAY lit but sound not produced	• Speaker cords not securely connected • Improper position of the audio function button • Volume control set to minimum • MUTING is on • Digital signals not input. Digital input selected • The play mode is set to "EXT IN"	• Connect securely • Set to a suitable position • Turn volume up to suitable level • Switch off MUTING • Input digital signals or select input jacks to which digital signals are being input • Set the play mode to "STEREO"	8, 9 21 21 22 21 6, 21
-PROTECT- display appears	• Speaker terminals are short-circuited • Block the ventilation holes of the set • The unit is operating at continuous high power conditions and/or inadequate ventilation	• Switch power off, connect speakers properly, then switch power back on • Turn off the set's power, then ventilate it well to cool it down. Once the set is cooled down, turn the power back on. • Turn off the set's power, then ventilate it well to cool it down. Once the set is cooled down, turn the power back on.	8, 9 2 2
Sound produced only from one channel	• Incomplete connection of speaker cords • Incomplete connection of input/output cords	• Connect securely • Connect securely	8, 9 4 ~ 9
Positions of instruments reversed during stereo playback	• Reverse connections of left and right speakers or left and right input/output cords	• Check left and right connections	4 ~ 9
The on screen display is not displayed	• "On screen display" is set to off on the system setup menu screen	• Set "on screen display" on the system setup menu screen to on	15
Humming noise produced when record is playing	• Ground wire of turntable not connected properly • Incomplete PHONO jack connection • TV or radio transmission antenna nearby	• Connect securely • Connect securely • Contact your store of purchase	4 4 —
Howling noise produced when volume is high	• Turntable and speaker systems too close together • Floor is unstable and vibrates easily	• Separate as much as possible • Use cushions to absorb speaker vibrations transmitted by floor. If turntable is not equipped with insulators, use audio insulators (commonly available)	— —
Sound is distorted	• Stylus pressure too weak • Dust or dirt on stylus • Cartridge defective	• Apply proper stylus pressure • Check stylus • Replace cartridge	— — —
Volume is weak	• MC cartridge being used	• Replace with MM cartridge or use a head amplifier or step-up transformer	4
This unit does not operate properly when remote control unit is used	• Batteries dead • Remote control unit too far from this unit. • Obstacle between this unit and remote control unit • Different button is being pressed • ⊕ and ⊖ ends of battery inserted in reverse	• Replace with new batteries • Move closer • Remove obstacle • Press the proper button • Insert batteries properly	16 16 16 — 16

SPECIFICATIONS

• Audio section	
(Power amplifier)	
Rated output: (All properties shown are only for the power amplifier stage.)	Stereo (2ch driven) 140 W × 2 ch (8 Ω / ohms, 20 Hz ~ 20 kHz with 0.05% T.H.D.) 170 W × 2 ch (8 Ω / ohms, 1 kHz with 0.7% T.H.D.)
Dynamic power:	Surround 140 W × 5 ch (8 Ω / ohms, 1 kHz with 0.7% T.H.D.) 170 W × 2 ch (8 Ω / ohms) 280 W × 2 ch (4 Ω / ohms) 350 W × 2 ch (2 Ω / ohms)
Output terminals:	Front / Center: A or B or Bi-wiring 8 to 16 Ω / ohms A + B 16 Ω / ohms Surround: 8 to 16 Ω / ohms
(Analog)	
Input sensitivity / input impedance:	200 mV / 47 kΩ / kohms
Frequency response:	10 Hz ~ 100 kHz: +0, -3 dB (DIRECT mode)
S / N:	105 dB (DIRECT mode)
Distortion:	0.005% (20 Hz ~ 20 kHz) (DIRECT mode)
Rated output / maximum output:	1.2 V / 8 V
Maximum headphones output:	284 mW (8 Ω / ohms)
Phono equalizer (PHONO input — REC OUT)	
Input Sensitivity:	2.5 mV
RIAA deviation:	± 1 dB (20 Hz to 20 kHz)
Signal-to-noise ratio:	74 dB (A weighting, with 5 mV input)
Rated output / Maximum output:	150 mV / 8 V
Distortion factor:	0.03% (1 kHz, 3 V)
(Digital)	
D / A output:	Rated output: 2 V (at 0 dB playback) Total harmonic distortion: 0.005% (1 kHz, at 0 dB) S / N ratio: 102 dB Dynamic range: 96 dB Format - Digital audio interface
Digital input:	
• Video section	
(Standard video jacks)	
Input / output level and impedance:	1 Vp-p, 75 Ω / ohms
Frequency response:	5 Hz ~ 10 MHz +0, -3 dB
(S-video jacks)	
Input / output level and impedance:	Y (brightness) signal: 1 Vp-p, 75 Ω / ohms C (color) signal: 0.286 Vp-p, 75 Ω / ohms
Frequency response:	5 Hz ~ 10 MHz +0, -3 dB
• General	
Power supply:	AC 230 V, 50 Hz (for Asia model) AC 120 V, 60 Hz (for Taiwan R.O.C. model)
Power consumption:	500 W
Maximum external dimensions:	434 (W) × 181 (H) × 486 (D) mm (17-3/32" × 7-1/8" × 19-1/8")
Weight:	24.5 kg (54 lbs)
• Remote control unit (RC-813)	
Batteries:	R6P/AA Type (two batteries)
External dimensions:	70 (W) × 215 (H) × 19 (D) mm (2-3/4" × 8-15/32" × 3/4")
Weight:	180 g (Approx. 6 oz) (including batteries)

* For purposes of improvement, specifications and design are subject to change without notice.

WIRE ARRANGEMENT

In case of wires require unclasp or loosening to move the location to perform adjustment or part replacement, be sure to rearrange them neatly to restore property in the same location as they were originally placed, or causing to produce a noise may occasionally occur.

DISASSEMBLY

(To reassemble reverse disassembly)

Note: When detached the Bottom Cover, do not remove the Back Panel except the unit is in the normal putting state.

1. Top Cover

Remove 10 screws (A) fixing the Top Cover and 4 screws (B) mounting the Rear Panel, then detach the Top Cover as shown in the arrow direction.

2. Front Panel

Remove 3 upper screws (C) and 5 below screws (D), pull out 2 Tone Knobs.

After removing the Front Panel as shown in the arrow direction, and disconnect FFC cable which connected to the FLD P.W.Board, 5P connector and power switch connector, then detach the Front panel.

3. Each Front Panel P.W.Board

Pull out the Master VR Knob and remove the Nut.

Remove 6 screws (E) mounting the Front Panel and detach the Remoon Unit (1U-2949-3) and the Power SW Unit (1U-2949-11).

Remove 7 screws (F) mounting the Front Panel and detach the switch Unit (1U-2951-5).

Remove a screw (G) and 9 screw (H) mounting the Front Panel, and detach the Master VR Unit (1U-2951-4) and the Display Unit (1U-1951-3) together.

4. MCON Unit (1U-2953-2)

Remove 22 screws ① fixing the Bottom Cover, and detach the Bottom Cover.

Remove 10 screws ② mounting the Back Panel, and detach the Back Plate.

Notes:

- When servicing the unit, do not detach the Back Panel except the unit is in the normal putting state.
- Be careful that when removing 10 screws ② mounting the Back plate and digital input (Coaxial & AC3-RF), the digital coaxial & AC3-RF will not actuate normally.

Remove 6 screws ③ fixing the MCON Unit, detach the MCON Unit (1U-2953-2) as shown in the arrow direction, then disconnect a connector and 2 FFC cables.

Caution:

When detached the Bottom Cover, if you want to place the unit in the normal putting state, be sure to unfasten the Holder ★ before.

5. Each P.W.Board

5-1 Power Radiator

Remove 2 screws ④ fixing the Power Radiator.

Remove 10 screws ⑥ fixing the Support Bracket, Support Bracket and shield chassis, and detach them.

Remove 3 screws ⑦, then detach the Power Radiator.

5-2 Each P.W.Board mounting the Back Panel

Remove 4 screws ⑧ fixing the Back Panel and 18 Screws ⑨ Fixing the Tuner Unit (1U-2948-2), Audio in Unit (1U-2948-1), Pre Amp Unit (1U-2949-1), C. Video Unit (1U-2951-2), S. Video Unit (1U-2951-1) and Power Unit (1U-2952-4), then detach the each P.W.Board as shown in the arrow direction.

5-3 EXT. IN Unit (1U-2948-3) and Wiring Unit (1U-2950-2)

Remove 1 screw ⑩ fixing the shield Bracket and remove 2 screws ⑪ fixing the EXT. IN Unit (1U-2948-3), then detach the Tunner Unit.

Remove 4 screws ⑫ fixing the wiring Unit (1U-2950-2), then detach the Wiring Unit.

5-4 Radiator SUB Ass'y (P. Supply-2 Unit 1U-2949D-2, P. Supply-3 Unit 1U-2950-1)

Remove 2 screws ① fixing the Radiator and remove 2 screws ② fixing the P. Supply-3 Unit (1U-2950-1), then disconnect each connector and detach the Radiator SUB Ass'y as shown in the arrow direction.

5-5 P. Supply-4 Unit (1U-2949-6) and P. Supply-1 Unit (1U-2952-2)

Remove 4 screws ③ and detach the P. Supply-1 Unit (1U-2952-2).

Remove 4 screws ④, then detach the P. Supply-4 Unit (1U-2949-6)

5-6 H/P Unit (1U-2949-4), Tone-2 Unit (1U-2950-3) and DSP Unit (1U-2953-1)

Remove 2 screws ⑤, then detach the DSP Unit (1U-2953-1).

Remove a screw ⑥ and undo a Snap Plate as shown in figure, then detach the H/P Unit (1U-2949-4).

Remove 2 Nuts and detach the Tone-2 Unit (1U-2950-3).

ADJUSTMENT

Audio Section

Idling Current (1U-2944-1)

Required measurement equipment : DC Voltmeter

Arrangement

- (1) Avoid direct blow from an air conditioner or an electric fan, and adjust the unit at normal room temperature 15 °C ~ 30 °C (59 °F ~ 86 °F).
- (2) Presetting
- | | | |
|--------------------------------|---|--|
| ● POWER (Power source switch) | → | OFF |
| ● VOLUME (Volume control) | → | 0: fully counterclockwise (○ min.) |
| ● BASS, TREBLE (Tone control) | → | 0: (Controls to center) |
| ● SPEAKER-A (Speaker terminal) | → | No load (Do not connect speaker, dummy resistor, etc.) |

Adjustment

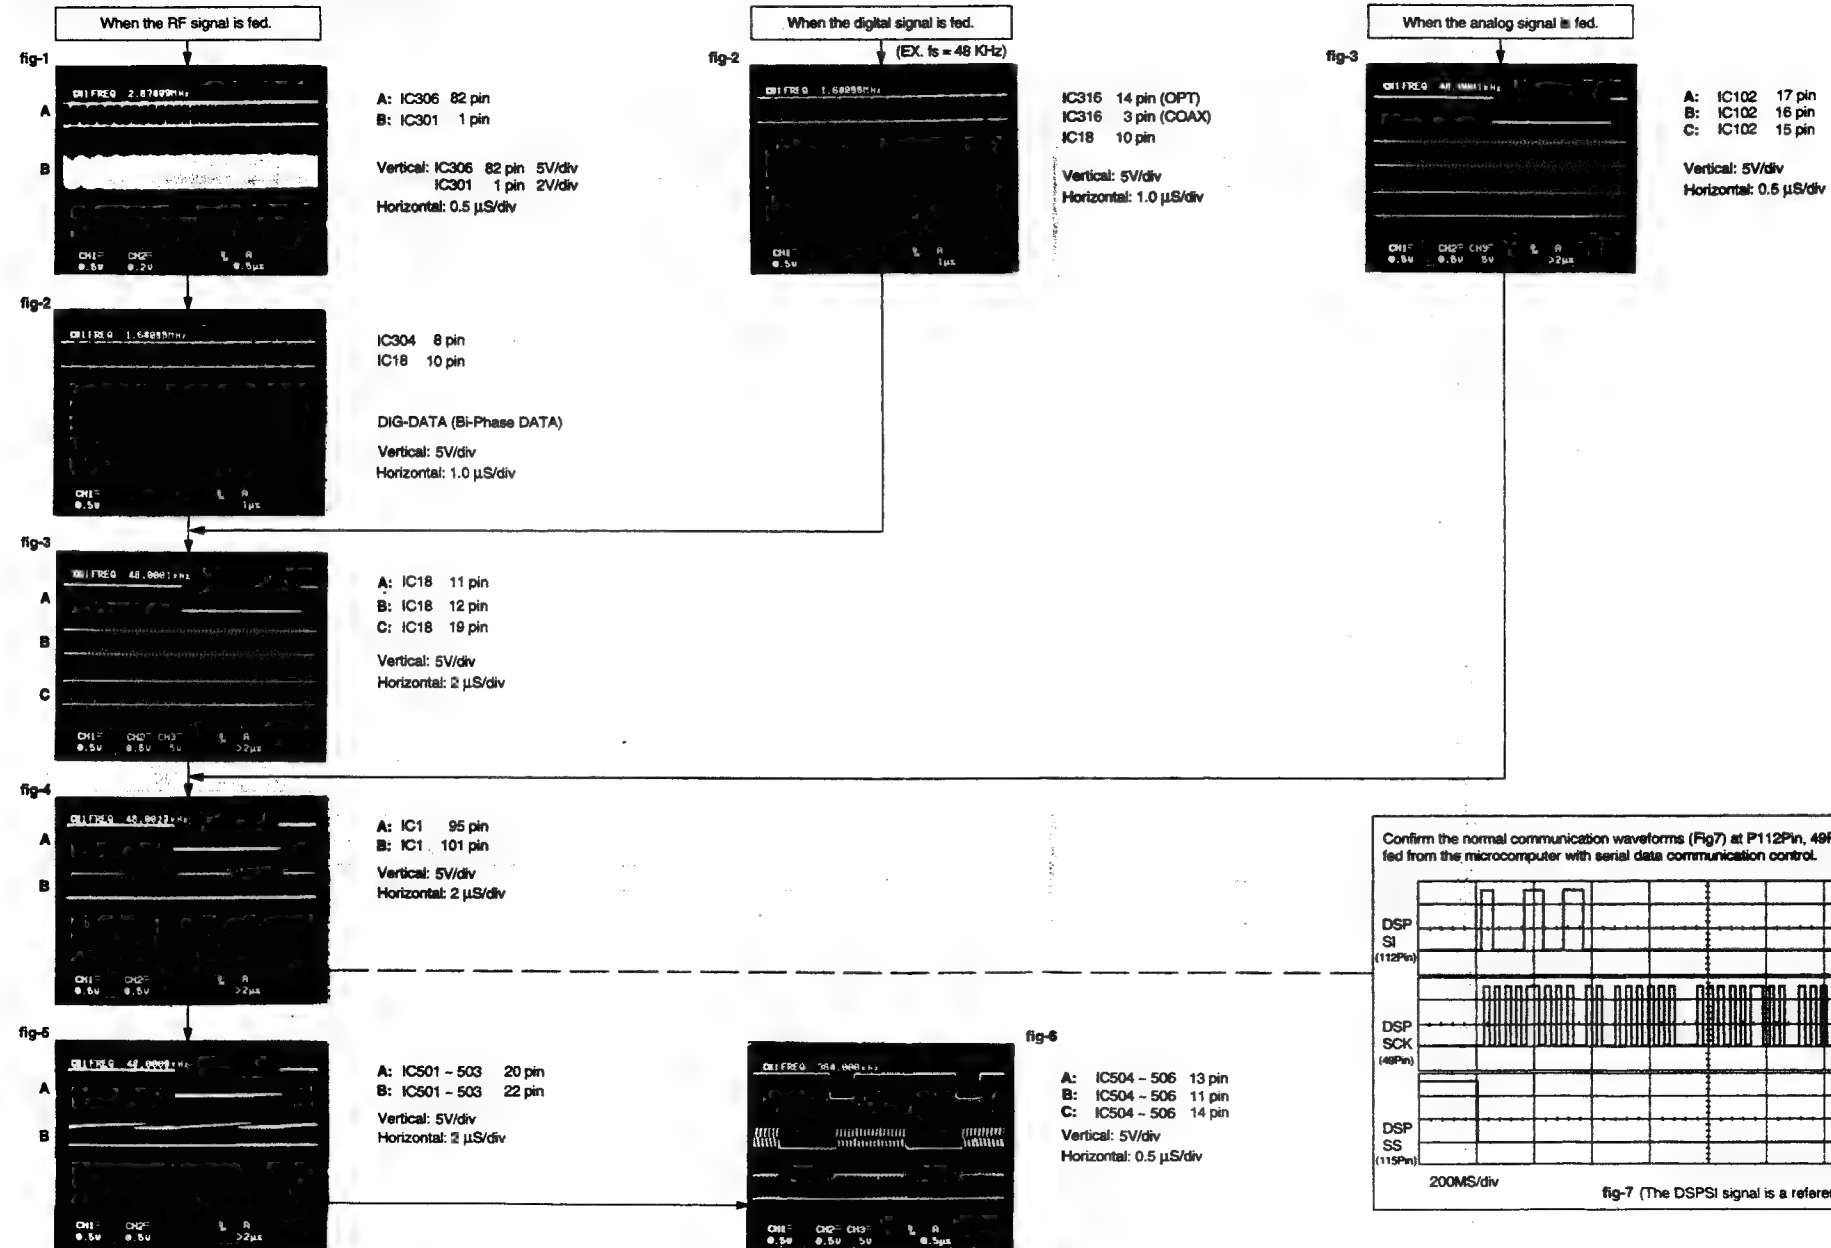

- (1) Remove top cover and set VR301 of 1U-2944-1 (Power Amp.-2 Unit) at counterclockwise () fully.
- (2) Connect DC Voltmeter to test points (FRONT-Lch: TP401, FRONT-Rch: TP402, CENTER ch: TP405, REAR-Lch: TP403, REAR-Rch: TP404).
- (3) Connect power cord to AC Line, and turn power switch "ON".
- (4) Presetting.

MODE	: 5ch STEREO
FUNCTION	: CD
- (5) Allow 2 minutes, and turn VR301 clockwise () and adjust the TEST POINTS voltage to 1.5 mV \pm 0.5 mV DC.
- (6) After 10 minutes from preset, turn VR301 to set the voltage to 3 mV \pm 0.5 mV DC.

Confirming for Digital Block (1U-2953-1, 2)

When the unit is in normal operation, the digital signals provide as shown in figure and confirm the test points with corresponding waveforms.

FUNCTION OF NEW CIRCUIT

Circuit Description

DOLBY AC-3

DOLBY AC-3 is a format of new surround signal reproduces maximum 5 channels, i. e. FRONT-LEFT, -RIGHT, CENTER and SURROUND-LEFT, -RIGHT ;plus exclusive subwoofer signal (0.1 ch), totally 5.1 channels from the exclusive digital signal.

Following is the featuring points of AC-3.

- (1) Makes surround channel into stereo.
- (2) Provides optimum separation due to independent processing of each channel signal.
(AC-3: More than 80 dB, PRO LOGIC: Approx. 25-40 dB)
- (3) Resultant surpassed orientation feeling and movement feeling obtained from uniform frequency characteristic.
(AC-3: 20Hz-20kHz all channels, PRO LOGIC: 20 Hz-20 kHz FRONT, CENTER channels 20 Hz-7 kHz SURROUND channels)
- (4) With the high-efficient signal coding technique, one digital cable permits transmission maintaining the above features.

Comparative Diagram of PRO LOGIC and AC-3

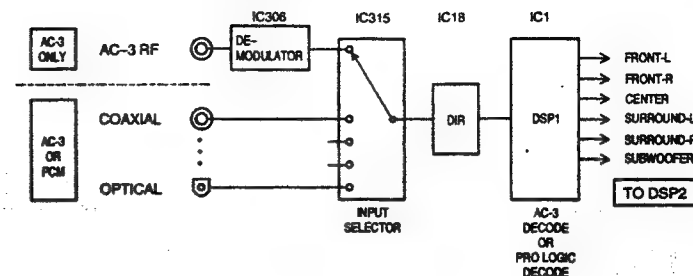

Two kinds of input signals: one corresponds "AC-3RF" signal emitting from LD player; the other is universal optical or coaxial digital format "IEC958" overlapped with "AC-3 exclusive" digital signal. AC-3RF signal is connected via the terminals "AC-3RF OUT" equipped with AC-3 corresponding LD player and "AC-3RF" input of AVC-A1 with a general coaxial digital cable. An applied signal to AVC-A1 goes through demodulator IC(IC305), delivered to DSP (IC1) through input selector (IC315), DIR (IC18) and executed decode processing of AC-3.

The other one is connected in the same way as universal optical or coaxial digital signal. AVC-A1 corresponds with automatic shifting of AC-3 and other signal (PCM) according to input signal.

The signal of each input terminal is delivered to selector (IC315) and applied the same process as to AC-3RF afterward. AC-3 data and PCM data are transmitted with a common line.

DSP (IC1) performs AC-3 decoding process, DOLBY PRO LOGIC process and PCM digital process and PCM digital process by shifting. Decoded signal to each channel after passed through DSP2 (IC2) is D/A converted and delivered to volume control.

Block Diagram of AC-3, PCM Input Section (1U-2953)

THX

THX is a tone quality improving technique of surround reproduction, to perform signal processing by positively combining either one of AC-3 or DOLBY PRO LOGIC.

THX makes the following additional process to AC-3 and DOLBY PRO LOGIC.

- (1) Filtering process based on human auditory sense and sound characteristic of movie theater.
- (2) Makes non-inter relation for surround channels
- (3) Non-clipping process for subwoofer channel.

AVP-A1 executes THX process with DSP2(IC2) to AC-3 or PRO LOGIC signal processed by DSP1 (IC1). Every operation mode shifting of surround mode is performed by micro computer. (Refer to Block Diagram)

44	P72	AC-3 MUTE	O	P	Id	—	L	H	Digital mute control terminal. (L: AC-3)
45	P73	FL RES	O	P	Id	—	L	H	Fluorescent display control output. (MSC1937)
46	P74	FL DATA	O	P	Id	S	L	H	Fluorescent display control output. (MSC1937)
47	P75	FL CLK	O	P	Id	S	L	H	Fluorescent display control output. (MSC1937)
48	P76	DSF1	O	P	Id	—	L	H	Digital filter emphasis forced OFF signal.
49	P77	NC	I	—	Id	—	L	L	No connection
50	P80	STANDBY LED	O	P	Id	—	L	H	Standby indication LED drive output. (H: Lighting)
51	P81	FRONT	O	P	Id	—	L	H	Front PRE out relay control output. (L: Mute)
52	P82	CENTER	O	P	Id	—	L	L	Center PRE out relay control output. (L: Mute)
53	P83	REAR	O	P	Id	—	L	L	Rear PRE out relay control output. (L: Mute)
54	P84	MULTI	O	P	Id	—	L	L	MULTI PRE out relay control output. (L: Mute)
55	P85	SUBWOOFER	O	P	Id	—	L	L	MONO PRE out relay control output. (L: Mute)

Pin No.	Port Name	Symbol	I/O	Type	Op	Det	Res	Ini	Function
56	P86	H/P	O	P	Id	—	L	H	H/P PRE out relay control output. (L: Mute)
57	P87	POWER	O	P	Id	—	L	H	Power supply relay control output. (H: ON)
58	P90	OV	I	—	—	—	L	—	Over load detecting input. (H: Over load)
59	P91	AC-3 DET.	I	—	—	—	L	—	AC-3 decode data input terminal. (L: AC-3 decode)
60	P92	F0	I	—	—	—	L	—	DIR control input terminal. (CS8412)
61	P93	F1	I	—	—	—	L	—	DIR control input terminal. (CS8412)
62	P94	F2	I	—	—	—	L	—	DIR control input terminal. (CS8412)
63	P95	CSI	I	—	—	—	L	—	DIR control input terminal. (CS8412) (H: PCM)
64	P96	ERR	I	—	—	—	L	—	DIR control input terminal. (CS8412) (H: ERR)
65	P97	DSF2	I	—	Id	—	L	L	Digital filter emphasis forced OFF signal.
66	VKK	VKK	I	—	—	—	—	—	Connect to ground.
67	P40/KEY0	S-MONITOR DET.	I	—	Eu	Lv	Z	—	Judgment whether S monitor is connected or not. (L: Connecting)
68	P41/KEY1	S-SIGNAL DET.	I	—	Eu	Lv	Z	—	S signal input control. (H: S signal input)
69	P42/KEY2	OSD SYNC DET.	I	—	Eu	Lv	Z	—	OSD sync switching signal. (H: External sync)
70	P43/KEY3	MVOL SELA	I	—	Eu	Lv	Z	H	Master volume setting signal. (Rotary encode)
71	P44/KEY4	MVOL SELB	I	—	Eu	Lv	Z	H	Master volume setting signal. (Rotary encode)
72	P45/KEY5	H/P DET.	I	—	Eu	Lv	Z	L	H/P input detection signal. (H: Detecting)
73	P46/CIN5	MODE	I	—	Eu	Lv	Z	—	Export country mode switching input.
74	P47/CIN4	KEY5	I	—	Eu	Lv	Z	H	Key input 5.
75	P50/CIN3	KEY4	I	—	Eu	Lv	Z	H	Key input 4.
76	P51/CIN2	KEY3	I	—	Eu	Lv	Z	H	Key input 3.
77	P52/CIN1	KEY2	I	—	Eu	Lv	Z	H	Key input 2.
78	P53/CIN0	KEY1	I	—	Eu	Lv	Z	H	Key input 1.
79	P54	SUB SYNC 1	I	—	Eu	Lv	Z	H	SUB microcomputer sync input.
80	P55/PMW	SO/ZORAN	I	—	Eu	Lv	Z	H	DSP data input terminal. (ZR38500)

NOTE:

Pin No. : Terminal number of microcomputer.

Port Name : The name entered in the data sheet of microcomputer.

Symbol : Symbolized interface function.

I/O : Input or out of part.

"I" = Input port

"O" = Output port

Type : Composition of port in case of output port.

"C" = CMOS output

"N" = NMOS open drain output

"P" = PMOS open drain output

Op : Pull up/Pull down selection information.

"Iu" = Inner microcomputer pull up

"Id" = Inner microcomputer pull down

"Eu" = External microcomputer pull up

"Ed" = External microcomputer pull down

Det : Indicates judging state of input port. Level detection is "LV"; Edge detection is "Ed"; Detection by both shifting is "E&L"; Serial data detection is "S" (Serial data output is also "S").

Res : State at reset.

"H" = Outputs High Level at reset

"L" = Outputs Low Level at reset

"Z" = Becomes High impedance mode at reset

Ini : Initial output state.

Function : Function and logical level explanation of signals to be interface.

TMP87CP71AF-**** (IC402) Terminal Function

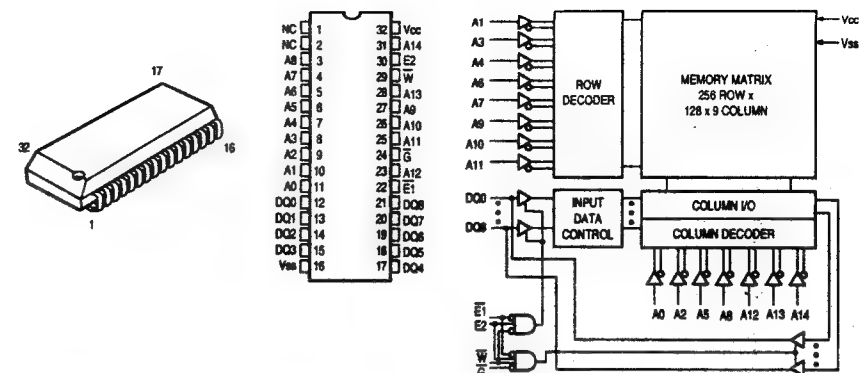

Pin No.	Port Name	Symbol	I/O	Type	Op	Det	Res	Ini	Function
1	P10/INT 0	DEM0D RES	O	C	—	—	Z	H	Demodulator reset control terminal. (L: Reset)
2	P11/INT 1	DEM0D POWER	O	C	—	—	Z	L	Demodulator power ON/OFF control terminal. (H: ON)
3	P12/INT 2	A/D POWER	O	C	—	—	Z	H	A/D converter power ON/OFF control terminal. (H: ON)
4	P13/DVO	FGAIN	O	C	—	—	Z	L	DIRECT GAIN control. (H: ON)
5	P14	DISCHARGE	O	C	—	—	Z	H	Pop noise prevention control terminal. (H: Power ON)
6	P15/TC2	NC	O	C	—	—	Z	L	No connection
7	P16	NC	O	C	—	—	Z	H	No connection
8	P17	NC	O	C	—	—	Z	L	No connection
9	TEST	TEST	I	—	GND	—	—	—	Connect to ground.
10	P21/XTIN	SUB SYNC1	O	N	Eu	—	Z	H	SUB microcomputer sync output.
11	P22/XTO	TONE	O	N	Eu	—	Z	L	Tone control terminal. (L: Direct, THX CINEMA test tone PEAK LIMITER ON)
12	RESET	RESET	I	—	Eu	Lv	L	—	Reset input.
13	XIN	XIN	I	—	—	—	—	—	Oscillator circuit terminal. (4 MHz)
14	XOUT	XOUT	O	—	—	—	—	—	Oscillator circuit terminal. (4 MHz)
15	VSS	VSS	I	—	GND	—	—	—	Ground.
16	P20/INT 5	POWER OFF	I	—	Eu	Lv	Z	—	Power OFF detection terminal. (L: Power OFF)

MCM6205DJ15
(DS: IC051, 052, 053, 308)

MCM6205D-15 Terminal Function

Pin No.	Symbol	I/O	Function
1	N.C.	-	No connection.
2	N.C.	-	No connection.
3	A8	I	Address 8 input.
4	A7	I	Address 7 input.
5	A6	I	Address 6 input.
6	A5	I	Address 5 input.
7	A4	I	Address 4 input.
8	A3	I	Address 3 input.
9	A2	I	Address 2 input.
10	A1	I	Address 1 input.
11	A0	I	Address 0 input.
12	DQ0	I/O	Data input/output.
13	DQ1	I/O	Data input/output.
14	DQ2	I/O	Data input/output.
15	DQ3	I/O	Data input/output.
16	GND	-	Ground.
17	DQ4	I/O	Data input/output.
18	DQ5	I/O	Data input/output.
19	DQ6	I/O	Data input/output.
20	DQ7	I/O	Data input/output.
21	DQ8	I/O	Data input/output.
22	E	I	Chip enable input.
23	A12	I	Address 12 input.
24	G	I	Output buffer control input signal.
25	A11	I	Address 11 input.
26	A10	I	Address 10 input.
27	A9	I	Address 9 input.
28	A13	I	Address 13 input.
29	W	I	Write enable input.
30	E2	I	Chip enable input.
31	A14	I	Address 14 input.
32	Vcc	-	+5V power supply.

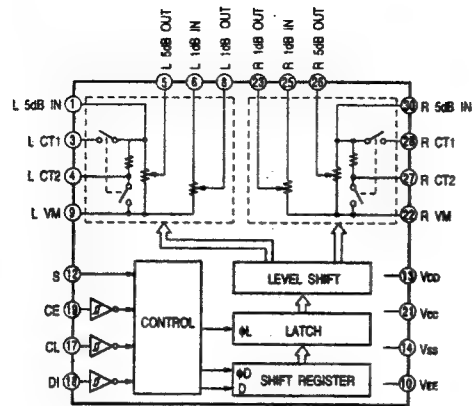

CS8412CS
(DS: IC18)

CS8412CS Terminal Function

Pin No.	Symbol	I/O	Function
1	C	I	C.S. bit input.
2	Cd F1		C.S. bit output/Frequency indication (H: C.S. bit output, L: Frequency indication).
3	Ce F0	O	CO="0" in C.S. bit is for professional use, and CO="1" is for general use.
4	Cd E2		C.S. bit output/Error indication (H: C.S. bit output, L: Error indication).
5	Ce E1	O	CO="0" in C.S. bit is for professional use, and CO="1" is for general use.
6	CO/E0		
7	VD+	-	Digital +5V power supply.
8	DGND	-	Connect to digital ground.
9	RXN	I	Differential line receiver signal. Compatible with RS422.
10	RXP	I	
11	FSYNC	I/O	Frame sync signal.
12	SCK	I/O	Serial clock signal, 32 clock is included with each audio sample in output status.
13	CS12/FCK	I	Channel selection/Reference frequency (H: Channel selection, L: Reference frequency). CS12 selects the channel output to C.S. terminal. "0" is for sub frame 1, and "1" is for sub frame 2. Input frequency can be detected by 6.144 MHz clock input to FCK.
14	U	I	User (U) bit terminal.
15	CBL	O	C.S. block output terminal.
16	SEL	I	C.S. F2-F0, E2-E0 selection signal (H: C.S. bit output, L: Frequency/Error indication).
17	M3		
18	M2	I	Serial port mode select signal.
19	MCK	I	Master clock signal (Low jitter clock output with 256 times of receiving frequency).
20	FILT	I	Filter terminal, connect resistor 1kohm and capacitor 0.047 μ F between this terminal and AGND.
21	AGND	-	Connect to analog ground.
22	VA+	-	Analog +5V power supply (Noise for this power supply should be minimized as lower as possible since it affects jitter's performance of playback clock directly).
23	M0		
24	M1	I	Serial port mode select signal.
25	ERF	O	Error flag signal.
26	SDATA	O	Serial data signal.
27	Ce F2	O	C.S. bit output/Frequency indication (H: C.S. bit output, L: Frequency indication). CO="0" in C.S. bit is for professional use, and CO="1" is for general use.
28	VERF	O	Parity and Error flag signal.

MSC1937-03RS
(VI: IC102)

MSC1937-03RS Terminal Function

Pin No.	Symbol	I/O	Function
1	Vas	-	Power supply (+5V).
2	16G	O	Digit 16 output.
3	15G	O	Digit 15 output.
4	14G	O	Digit 14 output.
5	13G	O	Digit 13 output.
6	12G	O	Digit 12 output.
7	11G	O	Digit 11 output.
8	10G	O	Digit 10 output.
9	9G	O	Digit 9 output.
10	8G	O	Digit 8 output.
11	7G	O	Digit 7 output.
12	6G	O	Digit 6 output.
13	5G	O	Digit 5 output.
14	4G	O	Digit 4 output.
15	3G	O	Digit 3 output.
16	2G	O	Digit 2 output.
17	1G	O	Digit 1 output.
18	GND	-	Ground.
19	NC	-	No connection.
20	RS	I	POWER-ON-RESET. (H: RESET)
21	DATA	I	Data input.
22	SCLK	I	Shift clock input.
23	A	O	Segment A output.
24	B	O	Segment B output.
25	C	O	Segment C output.
26	D	O	Segment D output.
27	E	O	Segment E output.
28	F	O	Segment F output.
29	G	O	Segment G output.
30	H	O	Segment H output.
31	I	O	Segment I output.
32	J	O	Segment J output.
33	K	O	Segment K output.
34	L	O	Segment L output.
35	M	O	Segment M output.
36	N	O	Segment N output.
37	O	O	Segment O output.
38	P	O	Segment P output.
39	TAIL	-	No connection.
40	PNT	O	Point output.

LC7536
(AU: IC503, 504)
(Pr: IC601, 604)

LC7536 Terminal Function

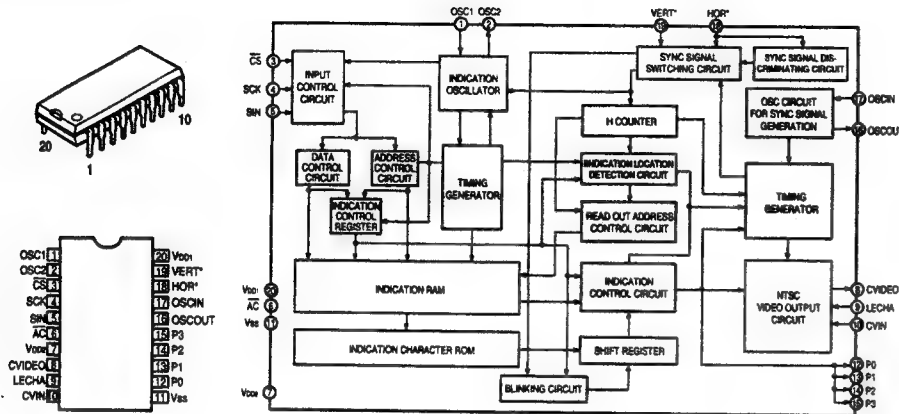

Pin No.	Symbol	I/O	Function
1	L 5dB IN	I	Input terminal for 5dB step attenuator, it should be driven with low impedance path.
2	NC	-	No connection.
3	L CT1	I	For loudness control, connect a capacitor between CT1 and 5dB IN with high frequency compensation, and also connect a capacitor between CT2 and Vm with low frequency compensation.
4	L CT2	I	
5	L 5dB OUT	O	Output terminal for 5dB step attenuator with approx. 1Mohm load impedance.
6	L 1dB IN	I	Input terminal for 1dB step attenuator, it should be driven with low impedance.
7	NC	-	No connection.
8	L 1dB OUT	O	Output terminal for 1dB step attenuator with approx. 47kohm ~ 1Mohm load impedance.
9	L VM	I	Common terminal for volume control.
10	VEE	I	Connect to power supply.
11	NC	-	No connection.
12	S	I	Selection terminal for address code during data format.
13	VDD	I	Connect to power supply (Pay attention to the rising time so that Vcc does rise up faster than VDD when the power turns).
14	Vss	I	Connect to power supply.
15	NC	-	No connection.
16	NC	-	No connection.
17	CL	I	Input terminal for controlling LC7536 serial data with 0 ~ 5V amplitude.
18	DI	I	
19	CE	I	
20	NC	-	No connection.
21	Vcc	I	Connect power supply (Pay attention to the rising time so that Vcc does not rise up faster than VDD when the power turns).
22	R VM	I	Common terminal for volume control.
23	R 1dB OUT	O	Output terminal for 1dB step attenuator with approx. 47kohm ~ 1Mohm load impedance.
24	NC	-	No connection.
25	R 1dB IN	I	Input terminal for 1dB step attenuator, it should be driven with low impedance.
26	R 5dB OUT	O	Output terminal for 5dB step attenuator with approx. 1Mohm load impedance.
27	R CT2	I	For loudness control, connect a capacitor between CT1 and 5dB IN with high frequency compensation, and also connect a capacitor between CT2 and Vm with low frequency compensation.
28	R CT1	I	
29	NC	-	No connection.
30	R 5dB IN	I	Input terminal for 5dB step attenuator, it should be driven with low impedance path.

DF1760U
(DS: IC102)

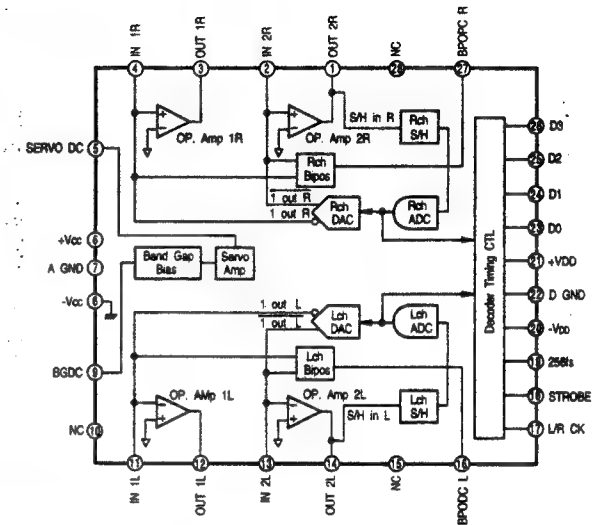

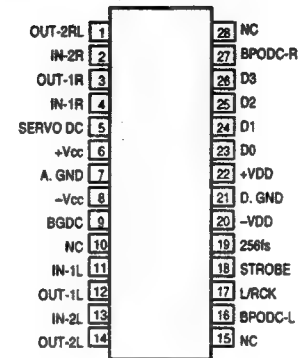

DF1760U Terminal Function

Pin No.	Symbol	I/O	Function
1	OVL	O	Lch overflow detection (H: Detection).
2	OVR	O	Rch overflow detection (H: Detection).
3	D3	I	Data input (MSB side).
4	D2	I	Data input.
5	D1	I	Data input.
6	D0	I	Data input (LSB side).
7	TP1	-	Test terminal (No connection).
8	VSS1	-	Ground for modulator.
9	VDD1	-	+5V power supply for modulator.
10	256fs	O	System clock output (256fs).
11	STROBE	I	Data strobe input (128fs).
12	LRCK	I	L/R clock input.
13	CALD	I	Calibration selecting (L: Effective).
14	CAL	O	Calibration input (H: During Execution).
15	SYSCLK	I	System clock input (256fs/384fs).
16	SCLK	I/O	Data clock (32fs-64fs).
17	L/R	I/O	L/R channel dividing clock signal.
18	SDATA	O	Serial data input.
19	FSYNC	I/O	Frame sync clock signal (2fs).
20	LRSC	I	L/R logical switching.
21	/PD	I	Power down mode (L: Power down).
22	MODE2	I	Output data model selection.
23	MODE1	I	Output data model selection.
24	SM	I	Slave/Master mode selection (H: Slave).
25	CLKSEL	I	System clock selection (H: 256fs).
26	TP2	-	Test terminal (No connection).
27	VDD2	-	Digital power supply (+5V).
28	VSS2	-	Digital ground.

M35015-204SP
 (VI: IC414)

M35015-204SP Terminal Function

Pin No.	Symbol	Name	I/O	Function
1	OSC1	Osc. circuit ext. terminal.	I	External terminal for indication oscillator circuit. Standard OSC. freq. is approx. 7MHz.
2	OSC2		O	With this OSC. freq., decides horizontal indicatin and character width.
3	CS	Chip select input	I	Chip select terminal and turns to "L" when transfer serial data. Hysteresis input. Pull up resistor is built-in.
4	SCK	Serial clock input	I	Takes in serial data of SIN at SCK rise when CS terminal is in "L". Hysteresis input. Pull up resisist is built-in.
5	SIN	Serial data input	I	Serial input of register for indication control and data, and address for indication data memory. Hysteresis input. Pull up resistor is built-in.
6	AC	Auto-clear input	I	Resets internal circuit of IC at "L" mode. Hysteresis input. Pull up resistor is built-in.
7	Vcc2	Power supply	—	Power supply terminal of analog system. Connect to +5V.
8	CVIDEO	Combined video output	O	Output terminal of combined video signal. Outputs 2Vp-p combined signal. Character output, etc. Overlap CVIN signal and outputs at superimpose.
9	LECHA	Character level input	I	Input terminal deciding character output level in combined video signal. color of character is white.
10	CVIN	Combined video input	I	Input terminal of external combined video signal. Character output etc. overlap this external combined video signal.
11	Vss	Ground	—	Ground terminal. Connect to GND.
12	P0	Output port p0	O	General output or character background signal BL NK1* output is switchable. Polarity can be selected at ROM mask.
13	P1	Output port P1	O	General output or character background signal CO1* output is switchable. Polarity can be selected at ROM mask.
14	P2	Output port P2	O	General output or character background signal BLNK2* output is switchable. Polarity can be selected at ROM mask.
15	P3	Output port P3	O	General output or character background signal CO2* output is switchable. Polarity can be selected at ROM mask.
16	OSCOUT	Ext. terminal for sync sig. OSC. Circuit	O	Terminal for external use of sync signal OSC. circuit. Use the freq.: 14.32MHz at NTSC system, 17.73MHz at PAL system, 14.30MHz at MPAL system.
17	OSCIN		I	
18	HOR*	Horizontal sync signal	I	Inputs horizontal sync signal. Hysteresis input.
19	VERT*	Vertical sync signal	—	Input vertical sync signal. Hysteresis input. Polarity can be selected at ROM mask.
20	VDD1	Power supply	I	Power supply terminal of digital system. Connect to +5V.

PCM1760U (DS: IC101)

PCM1760U Terminal Function

Pin No.	I/O	Symbol	Function
1	O	OUT-2R	Rich Amp. -2R output.
2	I	IN-2R	Rich Amp. -2R input.
3	O	OUT-1R	Rich Amp. -1R output.
4	I	IN-1R	Rich Amp. -2R input.
5	—	SERVO DC	Servo decoupling terminal.
6	—	+Vcc	Analog +5V power supply.
7	—	A. GND	Analog ground.
8	—	-Vcc	Analog -5V power supply.
9	—	BGDC	Band gap decoupling terminal.
10	—	NC	No connection.
11	I	IN-1L	Lch Amp-1L input.
12	O	OUT-1L	Lch Amp-1L output.
13	I	IN-2L	Lch Amp-2L input.
14	O	OUT-2L	Lch Amp-2L output.
15	—	NC	No connection.
16	—	BPODC-L	Lch bipolar offset decoupling terminal.
17	O	L/R CK	L/R clock output (64fs).
18	O	STROBE	Data strobe output (128fs).
19	I	256fs	System clock input (256fs).
20	—	-VDD	Digital -5V power supply.
21	—	D. GND	Digital ground.
22	—	+VDD	Digital +5V power supply.
23	O	D0	Data output (LSB side).
24	O	D1	Data output.
25	O	D2	Data output.
26	O	D3	Data output (MSB side).
27	—	BPODC-R	Rich bipolar offset decoupling terminal.
28	—	NC	No connection.

ZR38500 (A3) (DS: IC001)

ZR38500

Pin No.	Symbol	Function
1	OE	Output enable signal.
2	CAS	Column address strobe signal.
3	I/O3	Data input/output.
4	I/O4	Data input/output.
5	Vss	Ground.
6	I/O1	Data input/output.
7	I/O2	Data input/output.
8	WRITE	Read/write input.
9	RAS	Low address strobe signal.
10	N.C.	No connection.
11	A0	Address input.
12	A1	Address input.
13	A2	Address input.
14	A3	Address input.
15	Vcc	+5V power supply
16	A4	Address input.
17	A5	Address input.
18	A6	Address input.
19	A7	Address input.
20	A8	Address input.

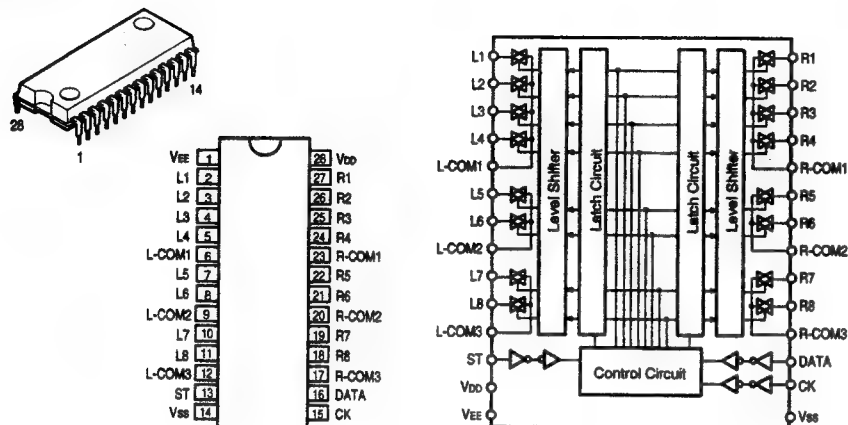

DSP56004 (DS: IC002)

Pin No.	Symbol	I/O	Function
1	V _{SS}	—	Use for double power supply: V _{DD} = 8.0 ~ 17V GND = 0V V _{SS} = -8.0 ~ -17V
2-12	S1-10	I	Analog switch input terminal.
13	GND	—	Use for double power supply: V _{DD} = 8.0 ~ 17V GND = 0V V _{SS} = -8.0 ~ -17V
14	CK	I	Clock input for data transfer.
15	DATA	I	Serial input for switch setting.
16	STB	I	Strobe input for data reading.
17-27	S1-10	I	Analog switch input terminal.
28	V _{DD}	—	Use for double power supply: V _{DD} = 8.0 ~ 17V GND = 0V V _{SS} = -8.0 ~ -17V

1U-2948A AUDIO IN UNIT ASS'Y

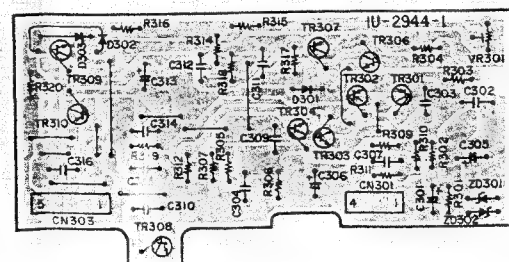

The image is a detailed technical drawing of a multi-board electronic system, specifically a radio receiver, showing the layout of 11 individual boards (IU-2949-1 through IU-2949-11) and their interconnections. The boards are populated with various electronic components including resistors, capacitors, integrated circuits, and transistors. The layout includes a central power supply section, a tuner section, a detector section, and a power output section. The boards are interconnected via a complex network of cables and connectors, with a central control unit (IU-2949-1) and a power supply unit (IU-2949-2) at the top. The bottom section shows the output stage with four output boards (IU-2949-7 to IU-2949-10) and a final output board (IU-2949-11). The drawing is a black and white technical illustration with numerous component labels and connection points.

NOTE FOR PARTS LIST

- Part indicated with the mark "⊙" are not always in stock and possibly to take a long period of time for supplying, or in some case supplying of part may be refused.
- When ordering of part, clearly indicate "1" and "I" (i) to avoid mis-supplying.
- Ordering part without stating its part number can not be supplied.
- Part indicated with the mark "★" is not illustrated in the exploded view.
- Not including Carbon Film $\pm 5\%$, 1/4W Type in the P.W.Board parts list. (Refer to the Schematic Diagram for those parts.)

WARNING:

Parts marked with this symbol \triangle have critical characteristics.
Use ONLY replacement parts recommended by the manufacturer.

● Resistors

Ex.: **RN** **14K** **2E** **182** **G** **FR**
Type Shape Power Resist- Allowable Others
 and per- ance error
 formance

RD : Carbon	2B : 1/8W	F : $\pm 1\%$	P : Pulse-resistant type
RC : Composition	2E : 1/4W	G : $\pm 2\%$	NL : Low noise type
RS : Metal oxide film	2H : 1/2W	J : $\pm 5\%$	NB : Non-burning type
RW : Winding	3A : 1W	K : $\pm 10\%$	FR : Fuse-resistor
RN : Metal film	3D : 2W	M : $\pm 20\%$	F : Lead wire forming
RK : Metal mixture	3F : 3W		
	3H : 5W		

* Resistance

$\overset{1}{\text{---}}\overset{8}{\text{---}}\overset{2}{\text{---}} \Rightarrow 1800 \text{ ohm} = 1.8 \text{ kohm}$
Indicates number of zeros after effective number.
2-digit effective number.

• Units: ohm

$\overset{1}{\text{---}}\overset{R}{\text{---}}\overset{2}{\text{---}} \Rightarrow 1.2 \text{ ohm}$
1-digit effective number.
2-digit effective number, decimal point indicated by R.

• Units: ohm

● Capacitors

Ex.: **CE** **04W** **1H** **2R2** **M** **BP**
Type Shape Dielectric Capacity Allowable Others
 and per- strength error
 formance

CE : Aluminum foil electrolytic	0J : 6.3V	F : $\pm 1\%$	HS : High stability type
CA : Aluminum solid electrolytic	1A : 10V	G : $\pm 2\%$	BP : Non-polar type
CS : Tantalum electrolytic	1C : 16V	J : $\pm 5\%$	HR : Ripple-resistant type
CQ : Film	1E : 25V	K : $\pm 10\%$	DL : For charge and discharge
CK : Ceramic	1V : 35V	M : $\pm 20\%$	HF : For assuring high frequency
CC : Ceramic	1H : 50V	Z : $\pm 80\%$	U : UL part
CP : Oil	2A : 100V	-20%	C : CSA part
CM : Mica	2B : 125V	P : $\pm 100\%$	W : UL-CSA type
CF : Metallized	2C : 160V	-0%	F : Lead wire forming
CH : Metallized	2D : 200V	C : $\pm 0.25\text{pF}$	
	2E : 250V	D : $\pm 0.5\text{pF}$	
	2H : 500V	= : Others	
	2J : 630V		

* Capacity (electrolytic only)

$\overset{2}{\text{---}}\overset{2}{\text{---}}\overset{2}{\text{---}} \Rightarrow 2200\mu\text{F}$
Indicates number of zeros after effective number.
2-digit effective number.

• Units: μF .

$\overset{2}{\text{---}}\overset{R}{\text{---}}\overset{2}{\text{---}} \Rightarrow 2.2\mu\text{F}$
1-digit effective number.
2-digit effective number, decimal point indicated by R.

• Units: μF .

* Capacity (except electrolytic)

$\overset{2}{\text{---}}\overset{2}{\text{---}}\overset{2}{\text{---}} \Rightarrow 2200\text{pF} = 0.0022\mu\text{F}$
(More than 2) — Indicates number of zeros after effective number.
2-digit effective number.

• Units: μF .

$\overset{2}{\text{---}}\overset{2}{\text{---}}\overset{1}{\text{---}} \Rightarrow 220\text{pF}$
(0 or 1) — Indicates number of zeros after effective number.
2-digit effective number.

• Units: pF.

• When the dielectric strength is indicated in AC, "AC" is included after the dielectric strength value.

NOTES

ALL RESISTANCE VALUES IN OHM. K=1,000 OHM, M=1,000,000 OHM
ALL CAPACITANCE VALUES IN MICRO FARAD. P=MICRO-MICRO FARAD
EACH VOLTAGE AND CURRENT ARE MEASURED AT NO SIGNAL INPUT
CONDITION.
CIRCUIT AND PARTS ARE SUBJECT TO CHANGE WITHOUT PRIOR
NOTICE.

WARNING:

Parts marked with this symbol  have critical characteristics.
Use ONLY replacement parts recommended by the manufacturer.

CAUTION:

Before returning the unit to the customer, make sure you make either (1) a leakage current check or (2) a line to chassis resistance check. If the leakage current exceeds 0.5 milliamps, or if the resistance from chassis to either side of the power cord is less than 240 kohms, the unit is defective.

WARNING:

DO NOT return the unit to the customer until the problem is located and corrected.

NOTES
ALL RESISTANCE VALUES IN OHM: K=1,000 OHM, M=1,000,000 OHM
ALL CAPACITANCE VALUES IN MICRO FARAD: P=MICRO-MICRO FARAD
EACH VOLTAGE AND CURRENT ARE MEASURED AT NO SIGNAL INPUT CONDITION
CIRCUIT AND PARTS ARE SUBJECT TO CHANGE WITHOUT PRIOR NOTICE

WARNING:
Parts marked with this symbol  have critical characteristics. Use ONLY replacement parts recommended by the manufacturer.

CAUTION:
Before returning the unit to the customer, make sure you make either (1) a leakage current check or (2) a line to chassis resistance check. If the leakage current exceeds 0.5 millamps, or if the resistance from chassis to either side of the power cord is less than 240 koms, the unit is defective.

WARNING:
DO NOT return the unit to the customer until the problem is located and corrected.
